PREFACE

THE present study is based on my dissertation on the same subject, which was presented for the doctorate at Harvard University in 1915. Much of the material is substantially the same as that which appeared in my thesis, although it has seemed unwise to present here all the evidence at my disposal. The wealth of what is available would furnish forth a small encyclopaedia; what I have printed here has seemed sufficient in general to indicate the extent and richness of the cult, and the footnotes, limited as they are, will even now be open to the charge of pedantry. Early in the course of this piece of research it became apparent that there was no special reason for trying to be exhaustive. Indeed, of late my temptation has been to meander through the subject, avoiding the systematic, and taking up each bit of material for what it is worth — and from that point of view it is worth a good deal. "For the essence of humanism," at least according to Pater, "is that belief . . . that nothing which has ever interested living men and women can wholly lose its vitality — no language they have spoken, nor oracle beside which they have hushed their voices, no dream which has once been entertained by actual human minds, nothing about which they have ever been passionate, or expended time and zeal." But the more formal method is probably also the more economical, at least in point of time.

My general subject was originally suggested to me by Professor W. A. Neilson, now President of Smith Col-

lege. He guided me through the initial perplexities of my work, and has read the present manuscript with a care that has produced many fruitful criticisms. Professor G. L. Kittredge of Harvard University has given me both the particular and the indefinable aid which one can hardly describe, but which all his students know. Several of the chapters were originally prepared under his supervision, and his advice and encouragement helped me at every point when as a graduate student I was living "in sorwe and care." Valuable assistance has come to me also from Professor F. N. Robinson; and for special favors I am under obligation to Professors Grandgent, Rand, Woods, and Lowes, and to the late Professor Edward S. Sheldon. I am indebted as well to the curators of the Bodleian Library, the library of the University of Cambridge, the British Museum, and the Bibliothèque Nationale of Paris, for permission to have the photographs made which appear in the plates of the present volume. My attention was drawn by Professor Roger S. Loomis of Columbia University to the inlay in the door at Siena, represented by plate 11; and Professor E. K. Rand of Harvard gave me the photograph of the painting shown in plate 12.

It is a pleasure for me to acknowledge these many kindnesses. More than a word should be added, however, with regard to the tireless and painstaking efforts of Miss Addie F. Rowe in checking up the details of this study; her conscientiousness and her bland indifference to reward should be known by more than those who are likely to have the advantage of her help.

INTRODUCTION

ANYONE who has investigated the literature of the Middle Ages or that of the Renaissance will be fully aware that at least one pagan deity seems to have survived the decline and fall of ancient Rome. Allusions to the Goddess Fortuna abound in the literature of those periods, as references to Venus and Jove and other members of the classical pantheon do not. Even now, in our own day, we find some mention of the capricious deity in passages where there is no conscious intention of a classical allusion; and pictures of the goddess, standing on a ball or turning her prepotent wheel, still adorn magazines and gift-cards, and even invade the pages of our dignified journalism. But in earlier times the instances were far more numerous. An author could hardly compose a poem without devoting at least a stanza to the goddess; books introduced some mention of her on nearly every page; the philosopher seriously discussed the meaning of such a figure; clerk and layman alike paid her a really extraordinary amount of attention. The result inevitably is that the wealth of all this material constitutes a special problem in itself, for the history of philosophy and literature, and also for the history of mankind.

One may easily dispose of the question how it is that Fortuna of all the deities was the only one to survive the change in religion with the advent of Christianity. I shall deal with some of the details of that process later,

but now I may briefly indicate the underlying principle which governs the matter. As investigators have several times observed, Fortuna is not the goddess of a special function, like Venus or Diana; she is not even the personification of a special aspect of fate, like Lachesis or Atropos. She represents one view, degraded if you like, of a universal, omnipotent god; and therefore her only rival could be such a figure as that of Jove. But in the period of decadent Rome, and in the early Middle Ages, it was not the figure of Jove that held sway, but that of the fickle goddess. And why? Because men at that time so regarded the universe — not as an ordered and properly ruled domain, but as the realm of the mutable and haphazard forces which we generalize and characterize as “chance.” With the coming of Christianity the idea of Jove, in so far as a trace of it survived during the Empire, was supplanted by that of the Christian God; but there was no new equivalent for the figure of ruling “chance,” and Fortune, accordingly, had that field to herself.

The problem of the element of “chance” in life was not considered in that period for the first time. It is one that almost certainly everybody has to face, and that mankind has had to deal with since first religious processes came to occupy its attention. Whether we acknowledge the existence of this element or not, somehow we seem to be forced to settle the problem, in so far, at least, as it involves ourselves. If life is in part a process of adjustment to one’s environment, it is necessary at the outset to have some conception about the nature of that environment, especially in the way in which it affects experience and conduct. Thus, by a gradual shaping of

opinion, which includes testing and rejecting, and no doubt much bungling of the matter, we come to hold our own views about the working of the universe, our views of whatever gods there be. In the material which serves to guide us in this development, the seemingly casual is bound to play a large part. Events which seem to happen by chance, or the interrelation of which, at least, seems to be wholly casual, greatly outnumber those which we can definitely ascribe to the visible working of some force. Furthermore, what direction controls the force itself? In order to guide one's own conduct into channels that lead profitably — and with what else is the world eternally occupied? — one has to make up one's mind as to the dependability and profit of things in general.

On such matters surely every human being has come to some conclusion, if only to decide that life is, or is not, worth living, and that on the whole he is willing to "take a chance." In this way the Goddess Fortuna is the reflection, simply, of one kind of human temperament. She is the answer which a certain type of person will give to these questions. The cynic has remarked that mankind creates its god in its own image; but let us observe rather that our apprehension of the Divine is necessarily qualified by the personality through which we have our vision. Human beings who perceive the validity of law and order will cherish faith in an ordered universe. Those, on the other hand, who find that order sometimes imposes restraint, and that restraint is sometimes tyranny, will rejoice in the freedom that beckons from uncharted ways, and for them a universe of chance will mean a universe of opportunity. The point of contrast is probably fundamental, and I suspect that, if we followed this

matter through and listened long enough to the wrangling of the contestants, we should find ultimately that it involves that ancient battle of the books, the age-old quarrel about classicism and romanticism. Some suggestion of this, at least, will be forthcoming later when we look into the history of the problem of Fortune.

The study of the goddess, then, is philosophical as well as literary, and on that basis I shall proceed. In the first place, I shall review the general history of the cult of Fortune in the Middle Ages; and afterward the more literary problems will be dealt with, including motifs and formulae (or themes) used in the accounts devoted to her, and various descriptions of her house and her wheel. But even these later chapters have a distinct bearing on the whole question of her philosophy and her meaning in the history of mankind. The trappings, the ritual of her worship, if we may call it so, have their own significance,—in their elaborateness, for one thing, and in the steadiness even unto monotony of their tradition, for another. The very number of these references means something. It would have been justifiable, even if not humanly possible, to include in my footnotes all the references to the goddess in all accessible literature, up to thousands upon thousands of items, no matter how confounding such a mass of footnotes might have been to a certain type of critic and to the “literati.” How indispensable the lady was to the mediaeval mind (as well as to that of later times) no one knows who has not tried to accumulate the vast number of passages in which she makes her everlastingly debonair appearance. But, while it is hardly possible to be really “exhaustive,” the present material may suggest the extent of her popularity.

Another limitation, however, is that of time: the full account of Fortune's career would reach back into the remote antiquity of ancient Rome and come down to the modern era; but here I have taken for my field only the Middle Ages, with a glance or two at what preceded and what followed. And I have necessarily been forced to exclude the parallel developments of this conception in German and Greek and other literatures, where Fortuna reigned also, but under a different name.

CHAPTER I

THE PHILOSOPHY OF FORTUNE

WHETHER its method is sound or not, or its conclusions fruitful, modern thought is indubitably moving toward the conclusion that man's opinion about God is fully as important for the study of man as it is for theology. It is perfectly obvious that the recorded conceptions of the Divine nature reveal the traces of differing human temperaments. If, as I have urged, the goddess of chance represents at least one of these, then, theoretically one might characterize a man, whether writer, philosopher, or plain layman, according to his confessed belief or disbelief in her. The conclusions one may reach will necessarily show the lack of precision that any attempt to classify human nature always shows; and yet they will have value in so far as they agree with experience, and in that way will gain validity for the reader. This, perhaps pseudo-scientific, task of analyzing human nature is practically what I have attempted in some detailed studies elsewhere ¹ concerning the opinions of various important literary men in the Middle Ages. A summary of these opinions, however, may have a special value in itself, to show the general trend of thought on this subject in the period. How did men in general feel about the problem of Fortune? Did opinion vary from one time to another? Was chance regarded as the ruling force of life?

Our estimate of the period is necessarily limited by the

¹ *Smith College Studies in Modern Languages*, vol. III, nos. 3 and 4; vol. IV, no. 4.

fact that we can draw our evidence only from the educated and the philosophical or literary element in the population. The lower classes, among which we should naturally expect to find primitive cults surviving the longest, either as religion or simply as folk-lore, have left us few records of their own ideas and customs. By references in St. Augustine and other early Fathers we know that, for a while at least, Fortuna remained alive among the people; lyrics of a more or less popular kind echo something of their devotion to the figure, whether in jest or in earnest; and the prevalence of the cult among the educated would make it highly probable that it was known to some extent elsewhere — especially if, as seems to be the case, a belief in pure chance is not commonly found in the philosophically-minded. Fortune as nothing more than a literary figure, as a conventional symbol of use to those who had some contact with the classics, would have been worn threadbare long since; but her meaning was really vital to everybody, and so, in spite of the vast number of allusions to her, and the frigid repetition of the formulae associated with her, she persisted.¹ And it requires little time to discover that apparently among all classes of men she is still familiar in our own day. We may therefore, I think, take the reflection in literature and philosophy in the period as fairly typical, and bear in mind that these writers set down their remarks, after all, for an audience.

A special difficulty of another kind, however, must be mentioned at this point. In tracing the history of the

¹ The history of personified Nature furnishes an interesting parallel for study. See Dr. Knowlton's investigations, *Journal of English and Germanic Philology*, XXIV, 409 ff., and references; cf. *Palaestra*, CX, Leipzig, 1923.

goddess we cannot always be sure of the precise conception for which she was a symbol. The difficulty is like that of the exact meaning of any word in any particular period. Yet a tradition which fixes the denotation of the name was fairly well established, and in most cases an author shows by his discussion what figure he had in mind.

I

In the pre-Christian period the Goddess Fortuna was not at all times identical with the goddess of chance. The word *fortuna* itself does not seem to carry any such basic idea at the outset, or anything indeed beyond the general conception of Fate. The idea that "Fate" operated in a casual way was apparently a later addition — after the lapse of centuries. In other words, from meaning simply "the one who brings our destiny," the term later came to signify the one who performs that act in a capricious way. Although someone may object to this theory of development on the ground that the word is at start feminine, we may note that, according to one view, the original deity was simply known as "Fors," to which "fortuna" was added as a cognomen, later only to break off and become independent;¹ but even the latter term might imply nothing more than the creative power, whether it served by itself in the first place, or not. In any case, there is a strong likelihood that at first the word implied pure Fate, and the development seems to have been parallel to that of the Greek *τύχη*.² Differing views of the force that controls external circumstances, or rather of the nature of the external (and sometimes the internal)

¹ See Carter, *Religion of Numa*, pp. 50 f.

² See Wissowa, *Real-Encyclopädie*, XIII, 12.

world, were thus reflected in the history of this expression. A period which saw the universe ruled by order used "Fors Fortuna," or simply "Fortuna," as the equivalent of "Fate"; another, which rejected order and emphasized (at least from the human point of view) caprice, used the term to mean "chance."

For the Middle Ages it is important merely to observe that the second attitude was in vogue at the end of the classical period, when, in fact, the meaning was fixed with that rigor which, more or less invading all classical Latin, meant that it was no longer a living language. From a wealth of possible illustrations two will serve. The first, from Ovid, is one which was well known in mediaeval times:

Passibus ambiguīs Fortuna volubilis errat
et manet in nullo certa tenaxque loco:
sed modo laeta uenit; uultus modo sumit acerbos;
et tantum constans in leuitate sua est.

(*Tristia*, V, viii, 15-18.)

The second, taken from the elder Pliny, shows the despair of a thoughtful man at the prevalence of the cult:

Inuenit tamen inter has utrasque sententias medium sibi ipsa mortalitas numen, quo minus etiam plana de deo coniectatio esset. toto quippe mundo et omnibus locis omnibusque horis omnium uocibus Fortuna sola inuocatur ac nominatur, una accusatur, rea una agitur, una cogitur, sola laudatur, sola arguitur et cum conuiciis colitur, volubilis . . . que, a plerisque uero et caeca existimata, uaga, inconstans, incerta, uaria, indignorumque faulrix. huic omnia expensa, huic feruntur accepta, et in tota ratione mortalium, sola utramque paginam facit, adeoque obnoxiae sumus sortis, ut prorsus ipsa pro deo sit qua deus probatur incertus.

(*Natural History*, ii, 22.)

The epithets here applied to the goddess may be found many times elsewhere. Horace speaks of her fickleness:

THE GODDESS FORTUNA

Transmutat incertos honores,
 nunc mihi, nunc alii benigna.
 (Odes, III, xxix, 51 f.)

She is described in various accounts as *caeca* and *fragilis*; she is a *meretrix*. Plutarch called in the philosophy of Aristotle to give her a reasonable basis of existence,¹ and explained her as the "cause by accident" which is proper only to man, and which is the necessary cause to allow for human free-will. She is not, however, rational enough even to reward virtue and punish vice: "Nihil eripit fortuna, nisi quod dedit: uirtutem autem non dat" (Seneca, *De Constantia Sapientiae*, v, 2).

In the Empire, then, Fortuna flourished with considerable power as the goddess of chance. I am not concerned to prove that she was in every case worshipped as an actual deity, or even so regarded;² there is ample evidence to show that, goddess or abstraction, she was enormously popular. There were numerous temples dedicated in her honor; in the differing aspects of her cult her activities became almost universal in scope, until as "Fortuna Panthea" she absorbed the functions of many other gods;³ and for several emperors she was nothing less than a tutelary. The reason for this remarkable growth is not far to seek. The Empire was an essentially romantic period, when Rome, with a limitless ambition for worldly conquest, ventured forth into the unknown, and in nearly every turn of human life felt the risks which imply chance. It was, moreover, a time of religious skep-

³ Roscher's *Lexikon*, 1534 ff., gives a convenient account of this phenomenon.

ticism, with a general dabbling in foreign creeds, and without much spiritual depth. At such a time Fortuna naturally came into her own. To men who felt that life shows no signs of fairness, that whatever lies beyond is at best dubious, that the most you can do is to take what comes your way, Fortuna represented a useful, if at some times flippant, summary of the way things go. "Euentus docuit fortes fortunam iuuare," they said,¹ not, I think, without cynicism. "Trust God and keep your powder dry."

As the Roman, however, came to regard himself as at the mercy of Fortune, so he tried to save himself by limiting her powers. One way to be successful in this was to show courage. Another was to oppose reason to her unreason, to live the life of wisdom; and another, less widely used, perhaps, was to devote one's self to those concerns in which Fortuna had no part — the activities of virtue. It is "prudentia" which Juvenal advocates (*Satires*, x, 363); and Seneca, whom I have already quoted in a similar connection, also writes as follows: "'Vnum Bonum esse, quod Honestum est.' . . . nam, qui alia bona iudicat, in fortunæ uenit potestatem, alieni arbitrii fit" (*Epistles*, lxxiv, 1). These methods of dealing with Fortuna move actually in the direction of putting her out of existence. Her power is at least not universal, if one may successfully take a stand against her. If reason maintains a validity above and beyond her caprice, if virtue has a meaning which she is unable to obliterate, she cannot be the only deity that rules the skies. In fact, in proportion as these methods are triumphant, she becomes a subordinate figure. Vigorous as she was, a possibility of a differ-

¹ Livy, *Historia*, viii, 29.

ent conception of things, therefore, was already in the mind of the Romans; and the fact of this possibility shows a need which would call for fulfilment.

II

A new conception was, of course, found in Christianity. Here was the idea of a rational God, who gave validity to reason; and here too virtue had a supreme significance. It can hardly be supposed that such a completely different view of things prevailed everywhere at once, any more than that everybody instantly became a devotee of what was regarded as a foreign and a not too respectable cult. The difficulty of the change, however, may be represented in a more subtle fashion than this. As in ancient Rome not everybody—indeed, probably very few people—had genuinely held the nobler opinions implicit in the opposition to Fortuna which I have described, so there would be a limited number in the early Middle Ages who would be ready for the conception of a rational God, or of a God who gave an essential meaning to virtue. This being the case, there were bound to be many who continued to see things in the old way. It was still possible for the human temperament to persist which believed mainly in chance. Spiritual rebirth could not come automatically to the whole of Europe. How far such a belief in chance was identified with a faith in Fortuna it would be impossible to determine; but the figure of the goddess was at least convenient, and extraordinarily familiar. The great number of allusions to her, the detailed accounts of her activities, the descriptions and portraits in the works of literally hundreds of authors, constitute, it would seem, almost a sufficient argument to prove the survival of her

worship in the Middle Ages. One impression of what happened in this particular is recorded in the statement of Cumont, that "in Latin Europe in spite of the anathemas of the church the belief remained confusedly alive all through the Middle Ages that on this earth everything happens somewhat 'Per ovra delle rote magne.'" ¹

The Church Fathers refer, with some uneasiness, to the pagan tradition of the goddess. In Tertullian's day and in that of St. Augustine, the special fidelity to Fortuna Muliebris, Fortuna Dux, Fortuna Barbata, and the like, was still alive. Her chief characteristic as the personification of disorder is presented steadily in the numerous accounts, which are found in many types of literature, from Martianus Capella down to the drinking-songs of the *Carmina Burana* and Nigellus Wireker's *Speculum Stultorum*, and even afterward. Arturo Graf held that "the populace, who understand little and care less about the subtle disputes and more subtle distinctions of the theologians and the philosophers, never abandoned faith in one or more powers, occult and irresistible, distinct and separate from the divine will, and variously designated, as the case might be, by the name of destiny, fortuna, or astrological influence." ²

The Roman goddess, however, could not flourish in her new background without, at least, readjustment. Belief in chance was not officially welcome to the new faith which maintained that even the hairs of the human head are numbered, and that not a sparrow falls without God's knowledge. Inasmuch as actual belief in the casual carried with it the assumption that just so much

² Graf, *Miti, Leggende e Superstizioni*, I, 276.

territory lay outside of the province of the Christian God, the Church waged special war against what was probably at first an unexpected foe in Fortuna. It was no longer sufficient to oppose her with fortitude, with prudence or with philosophy, or even with virtue. It must be made clear that she had no actual existence, that her works were only illusory. Such a definite stand was taken by the Fathers, from Lactantius and St. Augustine to St. Thomas Aquinas. According to such writers as Lactantius and St. Jerome, and others even as late as William of Malmesbury, the goddess is more or less identified with the spirit of evil, as in the case of so much else from pagan sources.

The Aristotelian argument that chance is necessary in order to make room for free-will is adopted in a modified form by St. Augustine and St. Thomas. Both, however, are definite in refusing to accept the figure of the goddess, and they agree in pointing out that in the last analysis what seems to come from chance has really a proper cause of its own. Fortune may be useful as a name for the *causa per accidens* which Aristotle defined, but it will not be ultimately justifiable to delude one's self into thinking that the personified figure has a basis in fact:

Sed quamvis haec opinio habeat ueram radicem, non tamen bene usi sunt nomine fortunae. Illud enim diuinum ordinans non potest dici uel nominari fortuna; quia secundum quod aliquid participat rationem uel ordinem, recedit a ratione fortunae. Vnde magis debet dici fortuna causa inferior, quae de se non habet ordinem ad euentum fortuitum, quam causa superior, si qua sit ordinans. Praetermittit tamen inquisitionem huius opinionis, tum quia excedit metas scientiae naturalis, tum quia infra manifestat quod fortuna non est causa per se, sed per accidens.²

² St. Thomas Aquinas, *Opera*, ed. Pope Leo XIII, II, 77 (9), *Commentaria Physicorum Aristotelis*.

And further:

Considerandum est autem quod si ea quae fortuito uel casualiter accidunt, idest praeter intentionem causarum inferiorum, reducantur in aliquam causam superiorem ordinantem ipsa; in comparatione ad illam causam non possunt dici fortuita uel casualia: unde illa causa superior non potest dici fortuna.¹

But it is only naïve opinion which holds that free thought ceases to exist where authority reigns. The Church proclaimed authoritative views on comparatively few points; on the rest men were allowed to differ. St. Thomas's characteristically sound logic, while it was widely representative, was not official. The pagan Fortuna continued on her primrose path, from her appearance in such a work, for example, as the lament of Hildebert of Lavardin, *De Exsilio Suo*,—Hildebert was Bishop of Le Mans and Tours in the early part of the twelfth century,—through the *Anticlaudianus* of Alain de l'Isle, —who was an ecclesiastic of the latter part of the twelfth,—down to the Renaissance. The description in the *Anticlaudianus* is, it is true, so confused, varying between a picture of the goddess and that merely of a personification of the abstract idea (the gifts which Fortune bestows), that one is led to conclude that the author did not take the figure of an actual deity very seriously. But, as far as he has any use for her at all, she reappears in her pagan guise.

A sign that the problem was for many men unsettled appears in the fact that some writers retained both Fortune and the Christian God, without any precise attempt to reconcile the two conceptions. One of the most influential figures in mediaeval thought, the remarkable Boe-

¹ *Ibid.*, p. 86 (13).

thius, of whose words echoes are found in literature for a thousand years, sets forth a clear picture of the pagan goddess and, at the same time, obviously worships the Christian God, without showing us exactly how the two may exist together in one universe. While he gives a character sketch of Fortuna thoroughly in accord with that familiar in classical literature, and almost certainly based in large measure on his reading there,¹ he only suggests a solution of the difficulty, taking his ideas in part from Aristotle. "Chance," we are told, allows for human free-will; fate is a servant of God; and chance, growing out of hidden causes, is also subject to Divine Providence:

Licet igitur definire casum esse inopinatum ex confluentibus causis in his quae ob aliquid geruntur euentum. concurrere uero atque confluere causas facit ordo ille ineuitabili conexione procedens, qui de prouidentiae fonte descendens cuncta suis locis temporibusque disponit.²

An imitation of the *Consolation of Philosophy* by a Christian priest in the twelfth (or early thirteenth) century, Henricus Septimellensis, conveys hardly more than a similar picture of the pagan deity.³ A compromise of the same kind is found in the long discussion in Albertus Magnus, where, as we should expect, the Aristotelian suggestions are developed more fully.⁴

It remained for Dante to give poetic reality to what is really implicit in the treatment in Boethius. In the familiar account of Fortune which it is Virgil's part to de-

BOETHIUS AND FORTUNE

It is this aspect of her greatness, the fact that she is only superficially opposed to reason, that brought one touch of adverse criticism to the poet. Cecco d'Ascoli wrote:

In ciò peccasti florentin poeta,
Ponendo che li ben de la fortuna
Necessitati siano con lor meta.
Non è fortuna che rason non venca.¹

This is the necessary attitude of the scholastic mind, and yet it appears that Dante answers this objection in his statement that Fortune's orderliness is hidden from the eyes of man.

Italian literature subsequent to Dante is, at least in part, a history of the development of these differing conceptions of Fortuna. She is the pagan deity; or she is allowed to exist along with the Christian God (which of the two was the more vivid probably varied with the attitude of individual men); or she is the angelic intelligence of whom Dante caught a vision. I cannot list here the direct imitations of Dante's account, but what he set forth was not satisfactory to everybody. Petrarch refers to the goddess many times, and in his study *De Remediis Utriusque Fortunae* he counsels mankind to oppose Fortune's wiles with wisdom and with spiritual devotion. In substance the book might have been written by any intellectual person in the classical period. In fact, the model for the work seems to have been Seneca, as Petrarch himself says, although he adds remedies against Good Fortune, whereas most writers in this vein discussed only Bad Fortune (*Fortuna Mala*). But one day

Petrarch was forced to declare himself on the problem of chance even more explicitly, and what happened is a revelation of what was going on in the popular mind at this period.

After King John of France was liberated from his English prison in 1360, Petrarch spoke before the monarch, consoling him for what he had suffered and rejoicing with him at his present relief. Perhaps the analogy to the case of Boethius sprang to his mind. At any rate he attributed all guilt for the King's experiences to Fortuna, and the very mention of her name disturbed his audience. At dinner afterward he was asked to give his opinion about the goddess; escaping from that predicament through an accidental turn of the King's interest, he was visited in his chamber by three *doctores*, who talked with him from *sesta* to *sera*.¹ Five years later Petrarch wrote a letter to a friend on the whole problem.² In this he takes the orthodox position of the Church Fathers, denying any existence to the goddess:

Io miserabile peccatore, inteso peraltro a cure secolaresche, uden-
dolo sulla bocca di tutti, e scritto trovandolo in ogni libro, lo ripetei
mille volte nelle mie opericciuole: e tanto fui lungi dal pentirmene
che scrissi non ha guari un libro avente per titolo: *I rimedi dell' una
e dell' altra fortuna*, ove non già di due Fortune, ma di una sola a due
faccie tenni lungo discorso. . . .

Ed io ti rispondo che la Fortuna veramente ho sempre stimato
esser nulla. . . . Credesi generalmente che quando accade alcuna

¹ For an account of the affair see Barbeau du Rocher, in *Mémoires de l'Académie des Inscriptions*, etc., 2d series, III, 189 ff. A translation of the letter (to Pietro di Portiers) is printed in *Lettere Familiari*, ed. Fracassetti, vol. IV, lib. xxii, lett. 13. For the "tragedy" of King John, see the story in Boccaccio's *De Casibus* and subsequent translations.

cosa senza cagione apparente (chè senza causa veramente non accade mai nulla), avvenga per caso, e s'imputa alla Fortuna.¹

A similar situation is found in the pages of Boccaccio. In his early works the spirit of what he writes is not unlike that of Ovid, and it is not surprising to find the capricious goddess mentioned on nearly every page, and several times discussed at length. She was a convenient figure when he wanted someone on whom to put the blame for his adversities in love. She fitted neatly into the classical apparatus when he was composing an epic; and she furnished a theme for the laments of Arcita and Troilo when they were speaking the poet's own passion to the Countess Maria. Jove and even the Christian God are introduced as well, without apparently much complicated attempt to reconcile them. But this skepticism, like that which obtained during the Empire in Rome, was not characteristic of Boccaccio's later life. Here, it is true, the number of references to Fortune is still great, but both in the *De Casibus* and in the *De Genealogia Deorum* the Christian conception seems to be present in the author's mind. In the latter he wrote as follows:

Lachesi poi cognominata dal fine: perciocche anco Iddio hà dato il suo fine alle cose c' hanno a uenire . . . Sono appresso di quelli, che uogliono Lachesi esser quella, che noi chiamiamo Fortuna.²

That he knew Dante's account is, of course, perfectly certain; and his own comment on the passage in the *Inferno*, besides showing this, also gives us his real opinion on the subject; for here he regards Fortuna as a poetic fiction.³

The pagan Fortune, or a kind of compromise, appears in the works of Fazio degli Uberti, Burchiello, Frezzi, and the novelists Masuccio Salernitano, Sannazaro, and others. Frezzi gives us a long passage describing the realm of Fortune, and seemingly she is regarded as the servant of God, although her function is more diabolic than otherwise.¹ Something like the Christian conception—or is it the scholastic?—is found in a *Ballata della Fortuna*:

Fortuna nonn' è nulla al mio parere,
anz' è 'l piacier di Dio in tutte cose.²

A tournament dramatized the strife of Reason with Fortune, and the latter won; for the conflict, instead of being settled in the *débat* which preceded, gave rise to the joust itself, where, naturally, Reason was not at a proper advantage.³ The pagan goddess plays a conspicuous part in the pages of Aeneas Sylvius, as we shall see from his account of her home, and in Boiardo's *Orlando Innamorato*, where the Fata Morgana borrows traits both from her and from Occasio. Alberti, in his treatise *Della Tranquillità dell' Animo*, follows the tradition from Petrarch's *De Remediis*, and opposes wisdom and virtue to the caprices of chance. Giovanni Pontano, in his book *De Fortuna*, presents nothing more than the scholastic doctrine, concluding, "Fortunam non esse Deum."⁴

⁴ In a suggestive and interesting article on Fortuna in the *Warburg Vortrage* (II, 1 Teil, 1924), A. Doren objects to my classification of the varying conceptions of Fortune; he finds it "nicht glücklich, weil nicht streng durchzuführen" (p. 139, note). Because he fails to observe that the classifi-

Something like the Christian conception of Dante, with the suggestion that Fortune is both angel and devil, however, is presented in the discussion of the subject by Pico della Mirandola, who quotes from St. Augustine, and brings up the old figure of the man discovering a treasure, which suggests, and rightly, that this author is a late follower of the Aristotelian tradition. On the other hand, the pagan idea continues in the work of Politian, Benivieni, Pulci, Ariosto, and others, until, with the full tide of the Renaissance, with its many features so reminiscent of the Roman golden age, Fortuna comes into her own with as much vitality as ever, defended even on philosophic grounds in a manner unheard of in ancient Rome. To Machiavelli, for instance, she was indispensable, if only to personify the forces from which his conception of the superman is to wrest his triumph. In the past, he maintains, men believed that the world was controlled by the Divine Power and by Fortune, and that therefore everything might as well be left to chance:

Al che pensando io qualche volta, mi sono in qualche parte inchinato nella opinione loro. Nondimanco perchè il nostro libero arbitrio non sia spento, giudico potere esser vero, che la fortuna sia

cation is philosophical, — as he shows by misunderstanding why I have listed the poems in the *Carmina Burana* as pagan (and his discussion of my treatment of the love-poetry and of Pontano shows the same mistake), — he does not realize that the method is fundamental and inevitable. On the other hand, his study of Renaissance material is somewhat weakened by the fact that the idea of man as master of his Fortune appears long before the Renaissance — e.g., in the works of John Gower — and is an outgrowth of the classical idea that Fortune aids the brave. A thirteenth-century instance has been recently cited by K. Hampe in the *Archiv für Kulturgeschichte*, XVII (1926), 1 Heft, pp. 20 ff. It is true that the egoistic note found in Machiavelli and others is not heard much before their day.

arbitra della metà delle azioni nostre, ma che ancora ella ne lasci governare l' altra metà o poco meno a noi.¹

This curious echo of the Aristotelian discussion, if it is an echo, only makes the rest of what Machiavelli has to say stand out as a more striking counterpart to the classical method and the classical conception. With many scattered testimonials to Fortune, the great utilitarian describes the goddess at length, with an account of her dwelling-place and a triumphant paean to her majestic sway. Everyone, including Jove, is afraid of her power, and to only a few does she give real happiness.²

"Chi considera bene non può negare che nelle cose umane la fortuna ha grandissima potestà," observes another writer of the same general period and of much the same temper, Francesco Guicciardini.³ In a significant manner he sets the typically Italian Renaissance conception of *Virtù* against Fortune, as practically one's only resource in dealing with the goddess; that is to say, Fortune yields, not to goodness, nor yet to wisdom, but to power. As Machiavelli remarked in so many words, the goddess is a lady and must be taken by storm. And thus the Renaissance welcomes the pagan figure, and gives her an appropriate place in its elaborate theology. Like the time of Augustus in Rome, it is a restless period, with much traffic and discovery, much hazarding of all that one had, much toying with strange gods for the very delight of their strangeness, much questioning (with little passion for an answer). The goddess of chance admira-

bly represented both its weakness and its strength. She is just the deity for the romantically-minded, for those who find life only in flux and change. She represents that conveniently adjustable religion for which certain temperaments long.

III

The survey of the material in the Italian field gives us a sufficiently complete picture of what happened to Fortune in the Middle Ages. Philosophy tried to annihilate her, but poetry was able to keep her, whether in a form agreeable to the Christian Church or not. In the Renaissance she comes into full vigor as an appropriate embodiment of the paganism and superstition of the time. The same process takes place in other countries where she is known, and to present a detailed study of conditions elsewhere would in general involve mere repetition. Yet by this statement I do not mean to imply that the growth in other soil was modelled, consciously or not, on the Italian plan. In each country differing conditions produced an independent life for the goddess; and the similarities which do occur are therefore all the more interesting, and the undeniably similar trend of the general development gains thereby a really profound significance.

It is unnecessary, however, to repeat here the detail that I have printed elsewhere, to which I have already made allusion. Here I shall limit myself to pointing out some special phases of the development in the French and English fields, phases that seem to me to have some meaning in relation to the whole point of this chapter. Apart from that, let it suffice to say that in Old French and Middle English the pagan Fortuna survives;

that wherever we turn in these fields we find the same *motifs*, the same "remedies" for her onslaught; and that occasionally the Christian denied her existence, or retained her by means of a figure not unlike that which is found in Dante's *Inferno*. The allusions and discussions in these literatures are not perfunctory, but show freshness and individuality. Furthermore, when the old conceptions are reproduced, they appear, not as borrowings, but as an independent flowering, with a life of their own.

It is true, of course, that there is an interrelation between England, France, and Italy. Many of the Latin writers of the early part of the period were living in France and studying there — Alanus de Insulis, for one example, and Albertus Magnus, for another. Petrarch, as I have said, was challenged by King John of France on the subject of Fortune. Little argument is necessary, however, to point out that the closer the contact between the two countries the more striking the differences in the accounts of the fickle goddess, and the more important.

If one grants, as I think one is really bound to, that Dante's figure of the Christian Fortuna is a remarkable conception, at once appealing to the imagination and satisfying to the intellect, then the reappearance of this figure, quite independently, in France and England is still more remarkable. In France there is something like a suggestion, in the works of Chrestien de Troyes and in the *Roman du Renart*, that God and Fortune do not work in opposition, or without some measure of concord. In the *Roman*, God apparently punishes some sinners on the wheel of Fortune:

Or prions le Roy Jhesu-Crist
 Qui pour nous char humaine prist,
 Que de tel roe nous destourgne.¹

Material from Boethius, in the writings of Simund de Freine, and extensively in the *Roman de la Rose*, may have helped the development. But next we see in the *Manekine* of Philippe de Beaumanoir, and in a dialogue between Fortune and Pierre de la Broche, and in the work of Watriquet de Couvin, the idea of the goddess as definitely in the service of the Christian God.

In the *Manekine* we read that God consents to Fortune's rule of the world.² The dialogue with Pierre de la Broche, however, with strong reminiscence of Boethius, shows the goddess as doing God's will and punishing the wicked.³ Here Reason calls on Fortune to defend herself against the charges raised by Pierre, but her replies simply rebuke Pierre for failure to keep true to God, and in general reveal something of the calm of the blessed figure in Dante. Watriquet, on the other hand, describing not Fortune but Aventure (who really represents the same idea), gives a very clear account of the relation between God and this capricious deity:

Frère, on m'apele Aventure,
 En terre m'a Diex estableie;
 Au main lever pas ne m'oublie,
 Tantost sui où je veil aler;
 Je fas le trop haut devaler,
 Nus n'a en moi juste fiance.
 Bien en vois la senefiance
 A mon cors de double figure,

Qu'en moi n'a point d'œuvre seüre.
 Nus n'i do it estr asseürez,

 Ne par fortune aventureus.¹

It will be seen on detailed investigation that the discussions in the works of these writers do not show the slightest trace of influence from Dante. Indeed, the growth shows every indication of being spontaneous and natural. A little later, in the satiric *Roman de Fauvel*, the Christian Fortune appears again, responsible, we are told, for the present unhappy condition of the Church; and here she is a daughter

Du roy qui sans commencement
 Regne et vit pardurablement.²

Other examples are found in the works of Jean de Condé, in an independent fourteenth-century manuscript (described by Gorra), and in Martin le Franc, — in addition to the passages already discussed. On the other hand, Fortune as a goddess of love, with nothing more than the pagan conception, flourishes in French literature: in the *Panthère d'Amours* of Nicole de Margival, in *Les Échecs Amoureux*, in the works of Guillaume de Machaut, Froissart, Deschamps, Charles d'Orléans, and elsewhere.

In England the situation is in many respects similar. From its Germanic heritage Old English received the figure of a goddess of ruthless and inscrutable destiny in

¹ *Li Miroirs as Dames*, ll. 158–169 (*Dits*, ed. Scheler, p. 6).

² Ed. Långfors (*Société des Anciens Textes Français*), ll. 1850 ff. F. von Bezold (*Das Fortleben der antiken Götter im mittelalterlichen Humanismus*, p. 81) finds Fortune as a daughter of the "göttlichen Geistes" in Heinrich of Mailand's *Controversia Hominis et Fortunae* (1254), a book that I have not seen.

Wyrd, who, we remember, "gæð ā . . . swā hīo scel."¹ There seems to be little doubt that this figure corresponded to the Latin idea of Fate, even as the Germanic Norns are a convenient equation for the three Fates. Fortune became known in England at least as early as the West Saxon translation of Boethius, in which Aelfred quite properly rendered Fortune the goddess by "woruldsæld" and fortune the abstraction by "wyrd."² Considerable mention of the figure does not appear, of course, until much later, when at length the opportunity to distinguish between an ordered fate and a capricious fortune was made possible by the actual borrowing of the words themselves. Many of the English passages regarding Fortune, like the remarkable one in the alliterative *Morte Arthure*, ll. 3250 ff., are suspect, as being at least adaptations from the French.³ John Gower, as we should properly suppose, annihilates the goddess, unless he takes her as a symbol for astrological influence; *Piers Plowman* presents her simply as the personified abstraction, riches; many writers in English and Scottish keep her in the pagan figure. In the *Book of the Duchesse*, possibly in order to follow the conventions of Court of Love poetry in this point as in all others, Chaucer uses the pagan idea to good effect, the inference being that the death of Blanche could be due only to the caprice of a heartless and irrational deity. After his intensive study of Boe-

thus, however, it is especially significant to notice that he introduced the Christian figure in the *Balade of Fortune*, without the slightest hint of influence from Dante:

Lo, th'execucion of the magestee
That al purveyeth of his rightwisesse,
That same thing 'Fortune' clepen ye,
Ye blinde bestes, ful of lewednesse! ¹

Although "Destinee" is described in the *Knight's Tale* (ll. 1663 ff.) with obvious indebtedness to the passage on Fortune in the *Inferno*, Chaucer returns to the Christian conception of Fortune herself, with echoes of both Boethius and Dante, in *Troilus and Criseyde*, showing, I think, that it was Boethius who furnished him with the basis for his idea, even while he was impressed with Dante's account.

Structurally the idea of Fortune as the servant of the Christian God has a profound effect on the plot of the *Troilus*. With its many allusions to the operation of fate, the story nevertheless does not proceed as a sentimental tragedy, in which the characters fall victim to some pitiless force external to themselves; but Troilus, unlike his prototype in the *Filostrato*, eventually discovers that his sufferings are pretty much the result of his own folly. Passages regarding the Christian conception are deliberately introduced by the poet ² to show that Fortune is the shepherdess of us poor beasts only under the direction of "heighe Jove" (the language distinctly recalling that in the *Balade*), and that therefore the plot does not move by chance, but in accordance with an actual if concealed plan that does not exclude human free-will. These pas-

sages occur at the two main crises of the story. Describing the effect in this isolated fashion may serve to make the purpose of the poem seem too sombre, and even heavy: Troilus, we remember, laughed at the woe of those who wept for his death. The actual result of relieving the poem of a sentimental type of fatalism is to take away the hopelessness of a setting where the pagan Fortune rules, and to show that Troilus is a healthier being when he can ridicule his own weakness than when he utters that interminable discourse on cruel fate in Book iv.¹

Something like the Christian figure appears in the works of the faithful and industrious Monk of Bury, John Lydgate, when he makes Fortune subject to the goddess Juno:

For Juno is the tresourere,
And fortune hir awmonere.²

Although this is translated from *Les Échecs Amoureux*,³ and may mean much or little in itself, it is in harmony with other references to a similar figure in the poet's writings.⁴ The pagan figure endures, on the other hand, in the lines of Hoccleve and in those of numerous other writers, both English and Scottish. At the time of the Renaissance in England Fortune is still with us, abundantly dealt with in the works of Sir Thomas More,⁵ and elsewhere.

THE CONTROVERSY BETWEEN FORTUNE AND VIRTUE

IV

For the mediaeval period, then, Fortune was a lively and ubiquitous figure, a shape-shifter who could not be put down. With the masses the pagan idea survived, apparently, without much change. The philosophically-minded acknowledged the phenomena that gave rise to her creation, but, committed as they were to a belief in a rational and orderly universe, they attributed these phenomena to hidden causes and so allowed the goddess no real existence. Such a solution, however, could not be a convincing summary of experience: nothing is a more devout act of faith than the intellectualist's (or the scientist's) belief in a rational universe. One thinks of the problem of the buried treasure and the man who comes upon it "accidentally." Naturally there are causes for the treasure, as well as for its burial in that particular spot; and there is a parallel chain of causes for the man's coming there at that particular time. Yet for the nexus between these facts and the effect of the discovery on the man's own career (spiritually as well as materially) what is to be said? What can time the discovery so that it will not be deeply injurious in the man's life? Yet if chance enters here, where may it not penetrate? The mediaeval philosopher took account of this exigency indirectly in his theory of hidden causes, the *causa per accidens*, and the omnipotent rational Deity; and yet, even with this explanation, enough emphasis hardly falls on the experience of apparent chance. To this more tangible element the poet, therefore, gave full recognition in personifying chance, — that is to say, in accepting the personified figure of the pagans, — and in making the figure subservient to the

rational God. In this way complete account was taken of both experience and faith, and reason itself was satisfied.

While, therefore, the pagan idea managed to keep a fairly large number of devotees, a compromise with Christianity was effected for others, and a genuinely Christian figure was created, retaining the title and the apparatus of the pagan cult. Leading poets arrived independently at this conception, and some lesser ones followed in their train. For much of the development Boethius was responsible, and his suggestions were far-reaching. At the time of the Renaissance, therefore, the goddess was still available in one form or another, and obviously in her pagan guise she was especially acceptable at that time. There is evidence to show that even in our own day she has persisted with some followers, although, of course, under the influence of certain recrudescient forms of materialism, the personification is less apt to be popular now than the mere abstraction.

Whether the goddess was ever actually believed in as something more than a symbolic creature, at least after the Roman period, it is really impossible to say. But we do know that there were people in the Middle Ages who could in terms of a deity conceive of what we call forces; and we know also how generally available the figure of Fortuna was, attempting in her libertine fashion to suit everybody. How far we are really entitled to unite the one fact with the other, and to conclude that just so far an actual faith in the capricious deity extended, I should not dare to conjecture. One may fairly assert, however, that all the evidence points to the conclusion that there was some faith of that kind in some quarters. What was substantially positive in this, and what was in harmony with her own truth, Christianity made her own.

CHAPTER II

TRADITIONAL THEMES OF FORTUNE IN MEDIAEVAL LITERATURE

IN the preceding chapters I have found it convenient to define three distinct mental attitudes toward Fortuna, — the pagan, the attitude of compromise, and the Christian, — and have thus practically defined three separate figures of the goddess: the independent ruling power, the power which shares the universe with some other force, and the power completely subservient to another god. In this chapter I need not discriminate sharply among these three figures, because it is my purpose to study the composite portrait of Fortuna in the Middle Ages, to observe the establishment and growth of the tradition, not chronologically but *en masse*, in order to see precisely what was the nature of that tradition. In other words, here we are not so much concerned with the philosophy of Fortune as with her paraphernalia.

The method of study which I shall pursue will be: (1) to establish the conception of Fortuna as a goddess; (2) to observe the epithets and technical terms of her cult; (3) to depict her general appearance and character as we find them described; (4) to determine the limits of her powers and the field of her activities; (5) to notice, in connection with all these topics, the literary formulae which are regularly used in expressing them, or, as I have already called these formulae, the "themes" of the tradition. One result of this study will be to enable us to put to-

gether a typical mediaeval account of Fortuna, so that we may criticize any particular mediaeval discussion either as purely traditional or as strikingly original. We may also draw some conclusions as to the nature of the development that gave rise to such elaborate properties and accoutrements.

I

THE GODDESS

Mere personification, or the attribution of a proper name, does not imply that Fortuna is strictly a goddess.¹ She is a goddess only while she remains in power as such, that is, while she actually bestows. What she bestows, what we take as the abstraction "fortuna," — good fortune, wealth, riches, and the like, — is often personified, and this figure may easily be confused with the divinity. This abstraction, when personified, is particularly marked by the qualities of the gifts. It is typical of persons endowed with these qualities, and hence may conveniently be called a "type." On the other hand, a symbol as a unit of allegory does not attempt to represent the original idea by reproducing its characteristics; the goddess should not require identification by these means. Fortuna is not particularly fortunate while she is meting out her gifts. In this way she is more easily distinguishable from a type than is such a figure as Justice, who to a certain extent must be just. Fortuna is, then, purely symbolic. She may not suffer what as a goddess she inflicts, whereas the type must continually suffer reversals of that kind.

¹ See *Smith College Studies in Modern Languages*, III, 188-190; and above, pp. 17, 30.

Between the two figures of symbol and type, however, there is continual danger of confusion; and, when it occurs, it means that the author did not have a clear idea of the deity. Yet there may be confusion in slight details, which are worth our attention because, using them as a starting-point, we can test the complete descriptions of the goddess with more security. Thus even in Ovid we find,

Nostra per aduersas agitur fortuna procellas;¹

and in Chaucer,

She goth upright and yet she halt.²

In one of the Vatican pictures she is represented on the sea, with a boat, a sail, and an oar, "car la fortune vient du commerce maritime"; but clearly "wealth" is what is implied by the artist.³ Again, she is found, involved in difficulties, in an emblem picturing a naked figure lifted from the sea by a mailed figure. The inscription, "Fortuna forti subleuanda Industria,"⁴ implies that she was sinking before her rescue. In all these cases the symbolism can best be explained by interpreting Fortuna as "possessions," "riches," and so on. The abstract "fortune" suffers adversity; that is, our riches are in poor condition, are sinking, are beaten by the winds, are lame. So much for this confusion of type and symbol.

For our present purposes, the name Fortuna must represent the goddess. With this name we have many qualifying epithets and adjectives, implying her nature. Here is a list of some which form a customary part of the tradition:

amara	invidiosa
aspera	laeta
belle	laide
benigna	lubrica
blind	mala
bona	meretrix
caeca	mobilis
crudel	noiosa
double	parjur
dulcia	perfidia
fallace	perversa
favorevole	ria
fera	ruinosa
fickle	surda
incerta	traitor
inconstans	tristia
infortune ¹	ugly
ingrata	vaga
inimica	varia
iniqua	variable
instabilis	volubilis ²

¹ See the play on the verb *fortuner* in Watriquet de Couvin's *Dis de Fortune*, ll. 49 ff. (*Dits*, ed. Scheler, p. 75): *desfortunez, fortunez, enfortunez, renfortunez, desfortune*.

² Cf. Canter, pp. 72 ff. With these we may note the words which, because of themes, are usually involved: *assalt, assaut; casus; colpa, coupe; estable, stable; fidem, faith; fiel; firm; ludum; miel; moë, moue, mowe; traboccare, trabuchier*, etc.

At least one or more of these words or its cognate enters into every literary discussion of the goddess,¹ and, following in her train, many of them pass from one language into another. These and many others are the technical vocabulary of her cult; and the rimes probably kept many of them going in pairs. Gathering a number of these expressions about her like robes, the goddess sweeps on down through the ages.

VENTURA

Ventura, or *Aventure*, is a name that at one time threatened to replace the name *Fortuna*. As we have elsewhere noticed,² *Ventura* receives a treatment similar to that of *Fortuna* herself. Like *Fortuna*, she turns a wheel, and exalts and debases; ³ she guides; ⁴ and she is confused with *Fate* or *Destiny*.⁵

Aventure was particularly well received in France. She is depicted in the Christian conception of *Watriquet*

de Couvin's *Mireoirs as Dames*.¹ Sometimes she goes hand in hand with Fortune,² or she may supersede her.³ At one time Adventure was apparently the more familiar term for "the casual," and was scarcely felt as a proper name. When the word got outside of French literature, it seems to have meant merely "chance" or "the chances" — a good commentary on its significance in French. The idea came to be that Fortune deals in *aventures*.⁴ Clearly, then, Fortune controlled these *aventures*, and so survived any danger of being overcome by the upstart.

EÜRE

As a substitute for Fortune, or at least as a companion, *Eüre* or *Maleüre*, gained great popularity in France. This figure is also endowed with power by Watrquet de Couvin, who helped to give Adventure such great vogue:

Eürs sui en terre apelez,
 Qui sert à ma dame Fortune,
 Qui ne crient au monde fors une,
 Qui seur lui ait poor ne force
 Ne vertu, jà tant s'i efforce,
 Car elle defforce les fors,

In Nicole de Margival's *Panthère d'Amours*, Eürs and Meseürs stand at the entrance to Fortune's house. The author explains that when Fortune is angry Eürs has no power.² By the time of Guillaume de Machaut, Eüre, now become Bonneürté, is fairly independent:

La dame a nom Bonneürté
Qui tient en sa main Sœurte
En la partie de Fortune;
Car il n'est personne nesune
Cui Fortune peüst abatre,
Se la dame le vuet debatre.

Bonneürté controls even Nature. Her duties include the bestowal of prosperity in general, the acquisition of friends for her favorites, victory over their enemies, and so on.³ The cult of Eüre or Maleüre was surprisingly large; ⁴ but here again Fortune was for some reason found

more satisfactory (perhaps because her name covered the conception of both fortune and misfortune), and she accordingly predominated. Neither Eüre nor Maleüre ever received the imaginative description which was lavished upon Fortuna, and they repeatedly threatened to lapse into pure abstractions or types. They did, however, contribute to the vocabulary of the Fortune tradition.¹

Other features in the description of Fortuna we shall observe in a later chapter — as, for instance, her forelock and baldness when she appears as Occasio.¹ Sometimes, however, she has flowing hair.² She has wings, because she is fleeting.³ In art her posture may have some significance. At least one of his drawings is said to have come from Roman sculpture (see his preface, pp. 3-4, and cf. p. 33, nos. 141, 143, 145), and obviously the others belong to a period earlier than 1568. wheel,¹ positions of course symbolic of her unsteadiness. She has an unpleasant reputation for being unclean, with a more or less constant reminiscence of the "whited sepulchre."² Other points of her description will occur as we go on.

As to her garments, her costume is characteristically changeable and differs from one writer to another. Boccaccio gives her "mollisque cutis, roseus color, ac purpurea uestis." Also he refers to her robe of many colors.³ Lydgate takes this touch in his *Fall of Princes*:

In his *Assembly of Gods* we find her gown of "gawdy grene chamelet" of changeable colors.⁵ Another description, this time of Adventure's costume, is given by Watrquet de Couvin in his *Mireoirs as Dames*:⁶

FICKLENESS

As we have seen in the description of Fortuna, much detail is given to symbolizing her inconstancy. On the whole, there is an average ratio of about five to three between the passages in which she appears unfavorable and those in which she is kindly; and very likely this average gives a little too much credit to favorable Fortuna, for the goddess is chiefly called on in cases of objection to her manner of doing things. Hence our usual optimistic interpretation of the abstract "fortune" cannot come from the name of the goddess.

Fortune is highly variable and scarcely knows her own mind. She is in doubt;³ she is sometimes asleep, but wakes up when she pleases;⁴ she goes along changing her style,⁵ or turning her face like a weathercock.⁶ Her inconstancy is so universal a theme⁷ that we must study the various motifs which symbolize it.

Since Fortuna is deceitful, there is probably no faith in her; ' he is a fool who trusts in her.'² For her wheel cannot stop: ' she would cease to be Fortuna if she ceased to be changeable.'⁴ Her moves are sudden and, of course, unexpected.⁵

Her changeableness leads inevitably to a comparison with the moon. As the moon varies from day to day, and as it controls the shifting tides, so Fortuna ceaselessly changes her aspect and turns the tide of mankind.⁶ Her

POWER

In enumerating the various traits of Fortuna's character I have dwelt particularly on her inconstancy in dealing out her gifts. Let us now consider what is the nature of these gifts and what are the limitations of her realm of activity.

There are many allusions to Fortune's might and her desire to show it.² Sometimes, indeed, she seems to be in complete control of human life, whether man makes any resistance or not. One poet tells us that

Fortuna tutto può, che dà 'l potere,
Nè senza il suo voler si volta foglia;

ite theme with poet and artist alike,¹ and plays a prominent part in the "formula of four" (*regnabo, regno, regnavi, sum sine regno*), which we shall study in connection with the wheel.² The point here is that Fortune controls royal offices.

Since Fortuna rules affairs at court, it is natural that she should be figured as a queen. She is crowned, and is empowered to rule her realm.³ This is another favorite theme in art.⁴ As a queen she is, of course, furnished with subjects and servants, who attend upon her will.⁵

This point brings our study to a rather remarkable conception. Fortune, we have seen, is queen, with a complete retinue; she is the mother of mankind, a daughter of Jove, and there has even been an idea that the men of ancient Rome thought of her as Jove's mother.¹ She stands on a ball or on a wheel, and her wheel has been compared with the moon.² Our summary even thus far may suggest a similarity to the figure of the Blessed Virgin as she has often been depicted in art. Anyone who studies the poetry dedicated to the Virgin would do well to see whether there has not been some influence, on one side or the other, between the poetry of Fortuna and that of the Virgin. For example, we read in one poem to Our Lady:

Li soleux est ta couverture:
La lune, souz tes piez pozée,
Se nos sénéfie à droiture
Que sor nos serez essaucée
Et seur fortune & seur nature.

Deschamps (*Œuvres*, IX, 358, ll. 11148 ff.) makes Diligence mistress of Fortune.

¹ See H. Dessau (*Hermes*, 1884, XIX, 453-455), refuting this idea. He shows that *Jovi puer* means *filia Jovis*. Cf. above, p. 49, n. 1.

And so the parallels continue. The Virgin is a fortress and a lofty rock, and Fortune's house is often on a towering rock. To be sure, the significance of the symbolism in the two cases is entirely different; but, despite the contrast in meaning, a greater effect may have been gained in the representation of Our Lady by use of some of the symbols already familiar in the cult of the pagan deity. The similarity of some of Murillo's pictures of the Blessed Virgin to some of the drawings of Fortuna is striking indeed. Incidentally I may mention that, in the poem of the *Wallace*, the hero has a significant vision of a lady, "full brycht and scheyne," who gives him a wand of red and green, blesses his face and eyes with a sapphire, and chooses him as her love. She tells him that his people are in pain but that he will return to them. She gives him a book divided into three parts, the first part in letters of brass, the second in gold, the third in silver, and then "on to the cloud ascendyt off his sycht." A clerk who interprets the dream observes,

I can nocht witt quhat qweyn at it suld be,
 Quethir fortoun, or our lady so fre.
 Lykly it is, be the brychtnes scho brocht,
 Modyr off him that all this world has wrocht.²

¹ Rutebeuf, *Œuvres*, II, 157. For the figure of a woman standing on the moon, see the book of Revelation, xii, 1. The parallelism with Fortuna must not be pressed too hard.

² *Wallace*, vii, 90-132. This lady reminds one of the magnificent "duches" who descended from the clouds to King Arthur (*Morte Arthure*, allit., ll. 3250 ff.).

Manifestly the author of the *Wallace* felt, whether he showed good taste or not, that there was some point in confusing the goddess with the Virgin, in mixing the profane with the sacred.¹ The exact degree of the dignity of Fortuna, however, can be determined only by a further study of her powers. We have seen that she is royal, that she sometimes controls the Church, and that she is the bestower of gifts to mankind. What is the nature of these gifts?

Fortuna is, of course, primarily the giver.² She gives, but, we must remember, she takes away again;³ and yet she does no injustice, for, after all, the possessions are hers.⁴ These possessions are of various kinds; but first and foremost there is a general notion that Fortune deals in the mundane, the temporal, in goods of mortal con-

¹ The point that the author of the *Wallace* wished to make is, clearly, that Wallace was not sure whether his hopes (to which he was led by the visionary lady) were dependable or not.

Our abstract "fortune" of to-day is in some uses dominated by this latter idea.

Some deliberate thought has, however, been expended on a more definite catalogue of Fortune's bounties; in fact, they are listed and published dogmatically, as it were, and the list is accepted. Frère Lorens, in his *Somme des Vices et des Vertus* (1279), sets forth the gifts of God as divided into those of nature, of fortune, and of grace. Nature bestows the properties of the body — fairness, strength, prowess, nobility, eloquence; and the properties of the soul — clear intelligence and subtle wit.¹ Fortune gives us "hautesces, honors, richesces, delices, prosperitez."² This list establishes for us the difference be-

tween the gifts of Nature and those of Fortune, and forms the beginning of a steady tradition.¹ A little extension of Fortune's powers, however, is found in Boccaccio, who speaks of "diuitias, honestum coniugium,² dilectissimam prolem, spectabiles amicitias, clientelas, & huiusmodi fortunae bona."³ Deschamps includes among the offerings of Fortuna "beauté de corps, jeunesce," and a variety of riches — "chiens et oisiaux, grans chevaulx pour jouter, Plaisans joyaulx," and the like.⁴

We must remember that Fortuna, when she is unfavorable, not only withholds these treasures but sends actual suffering, specifically *injuria*; ⁵ and that she sends what is due from her — failure as well as success — in her special functions as goddess of love, war, and so on.⁶

As Fortune may not only give but withhold high estate, so she may also cause a man to suffer particular kinds of debasement. He may actually be led to prison by her deceit. The prison theme is particularly important because it has a beginning in the great work of Boethius. Without exaggerating the importance of the *Consolatio*, it is fair to suspect that, when a mediaeval man in prison complained of Fortune, he was induced to think of blaming the goddess by remembering what Boethius did under similar circumstances. This theme is, moreover, a great favorite and suggests the influence of Boethius by its very extensiveness.¹ A theme of similar nature is that of banishment or exile caused by Fortuna.²

Of course the greatest injuries one can receive from Fortune nearly all consist in the fall from a high position,

from a state of happiness in general, as well as from a state of honor. "High to low" is the great theme in the middle ages as well as in classical times. Since this change in man's fortune is what really constitutes the mediaeval idea of tragedy, we may call this the "tragic theme." Dante thus describes tragedy for us: "In principio est admirabilis et quieta, in fine siue exitu est foetida et horribilis."¹ Now it is clear that, if tragedy deals with mankind, the unpleasant ending must be brought about by the ultimate suffering of some human figure. To cause this suffering is the particular work of Fortuna.² We see her lowering man's estate again and again in the mediaeval authors; the victim thinks he is secure in his greatest glory and suddenly falls.³ The more general theme

than this, the theme not of "falling" but of the transition from happiness to wretchedness, is also very widely used.¹

So far we are not sure whether Fortune acts justly or not in these cases that have been called tragedies. If the suffering of the chief figure in the scene comes accidentally, then we may indeed consider this a weak and sentimental kind of tragedy. No doubt that is how the term was understood in the Middle Ages, as the quotation from Dante indicates. But mediaeval authors wrote better stories than those of pure chance. We find many allusions to the wanton pride of the hero before his fall, a circumstance that makes the action of Fortuna more rational. Here she does not really put down the meritorious; she castigates pride, which was at this time considered as the greatest sin of all, as a vice involving every other.² The goddess may unreasonably exalt a man, but it is his own business to avoid self-satisfaction. Certain men, we learn, Fortune did succeed in making proud (and in this case she is not so definitely the Christian figure); or they became proud through their own fault — whereupon

Pride seems to have been considered the mental attitude of consciously or unconsciously measuring one's self with God.

she cast them down.¹ The remedy, of course, is to seek God and virtue, and not to prize the gifts of Fortune.²

The tragic theme is elaborated by means of numerous examples, and thus we arrive at what we may call genuine tragedies. The beginning of these, however, is found in the mere listing of the names of those who have suffered at the hands of Fortune. It is unnecessary to copy out the catalogues. We need only remark that the men cited were famous figures in the literature and history of the Middle Ages, and that some of them were Biblical.³

The complete development of this theme is found in Boccaccio's *De Casibus*, which is devoted entirely to summarizing the tragedies caused by Fortune. This work excited favorable comment and appreciation in its own time and had many translators and imitators.¹ As we should expect, Boccaccio makes the most elaborate use of the theme: he refers to the sin which the victim has committed,² in fact he often discusses it; he summarizes the victim's life, and he draws attention to the part Fortuna plays. No wonder Cassandra, in Chaucer's *Troilus*, attempts to divert Troilus with accounts of mishaps like his own, and no wonder she knew plenty of them:

The literary type of the tragedy caused by Fortuna was firmly established and well recognized in the Middle Ages. In such a type it is natural that we should have a use of the *ubi sunt* formula: "mais où sont les neiges d'antan!"²

So much, then, may be said of Fortune's power over high estate from which man may fall. Incidentally, this fall may also involve a fall from a position of wealth; but the theme of the control of Fortune over wealth includes still another motif which deserves separate attention. This is embodied in the contest of Fortune and Poverty. First, since Fortune gives riches, she also bestows poverty when she is in an unfavorable mood.³ Therefore adverse Fortuna and Poverty go together, they become companions; indeed, Poverty assists Fortuna.⁴ The type Poverty,

THE STRUGGLE WITH POVERTY

which suffers the blows of the goddess, does not accept adverse Fortuna's companionship so meekly. Boccaccio in his *De Casibus* describes a meeting between this figure and Fortuna:

The fable is told by Andalus, who relates how Poverty was sitting at the crossroads, dressed in a coat with a hundred holes [note Fortune's hundred hands, above, p. 44, n. 5] and deep in melancholy, when Fortune smiling proudly passed by. Rising with a harsh and bitter countenance, Poverty demanded, "Foolish one, why smilest thou?" Fortune replied, "I am looking with wonder at thee and thy dearth, thy pallor, fleeing thy friends, and arousing dogs." Poverty, angered by the words and hardly withholding her fists, answered: "Lo, Fortuna, foolish judge, part-goddess, why dost thou slander me? I deny that my estate is caused by thee; for I am here by my own free-will. Let us compare our powers." Fortune responded derisively: "See what an obstinate spirit this wretched woman has because I have reduced her. It will take still more to sink her pride." A little pleased with this, Poverty said: "We have already won part of the victory, for this trifter is stirred. But you mistake if you think I shall move to soften you with flattery. I have renounced all your gifts by my free-will. You think to debase me, but you raise me on high without knowing it; for he who does not wish to have riches is exalted in thought, considering the lofty possessions he would not own if he served the worldly." Fortune replied with ill-patience, reminding Poverty of her power. "I believe you really do wonderful things," said Poverty, "as I have often seen. Let us try our strength. If you talk about kings, I have been nurse to the Emperor of Rome and I was not then clad better than now." Nearly desperate, Fortune answered, "Certainly this woman will make me mad with her presumption!" Poverty will fight her, and insists that they fight on one condition — that she who conquers shall put such law as pleases her upon the conquered. "What judges shall we have, what pledges?" sneered Fortune. "No man will be hostage for you. What prize can you give?" "You must fight me for myself alone, since I have nothing else," answered Poverty. Fortune said she could lead Poverty to prison and keep her chained there; that way, however, Poverty would only feed at Fortune's expense. She would have Poverty flayed. Poverty having no armor, Fortune immediately flung herself upon her adversary; but Poverty finally made Fortune fall swooning, put her knee on her

breast, bound her tightly, and did not let her recover until she confessed that she was conquered. "You know my power," said Poverty; "now feel my graciousness. I had intended to break your wheel, but I have pity. You must keep the law I impose on you. You have control over fortune and misfortune; I want half the lordship, and I order that you bind Misfortune to a stake in a public place, so that he cannot pass any threshold or follow anybody unless some one looses him from his bondage. If you agree to this, you are free." Fortune was released and kept faith.¹

Poverty is proof against the turns of Fortune and is therefore wholly admirable.² But in all adverse circumstances there is another consolation besides that afforded by Poverty in Boccaccio: it is in such situations that we discover our true friends, and a friend in need is a friend indeed. This theme of the "friend in need," which is very important and widespread, furnishes the substance of Chaucer's "balade" on the subject of Fortune.³

This theme brings us almost to the close of our description of Fortune's powers and capabilities and the accompanying formulae. But the discussion would be incomplete unless we examined the extent of her powers in regard to the boundaries between the field of her activities and the domain of other gods. What is the difference between the gifts of Fortune and the gifts of Nature, Astrology, and Fate? We have already given some attention to the bounties of Fortune and those of Nature,¹ and have observed that Nature confers gifts relating to the body and the soul. This is already hinted at in the works of the Church Fathers, where Nature is said to control outer nature and physical man.² A distinction between Nature and Fortune seems to have persisted throughout the Middle Ages.³ In Alanus de Insulis, Nature appears to be chiefly in control of "external nature" as we understand the phrase to-day;⁴ and this idea, to-

gether with the theory of Nature's control over man's physical and mental endowments, seems to continue.¹

Originally, also, Fortune was different from Astrology.² Fortune is fickle, but the stars are arranged in accordance with the primal and enduring plan of a fixed destiny. They send down their influence according to their revolutions. The Church Fathers would say that, since Fortune and Astrology are both ministers of the Divine will, they are simply different modes of expression of that will;³ but the poets, when aroused, do not seem particular about discriminating between these different modes of

Hoepffner, I, 270) makes Bonneurté superior to Nature; in Simund de Freine's *Roman de Philosophie*, ll. 331 ff., Nature controls Fortune's acts.

² I am aware that astrology, as it is generally used and as I have sometimes used it here, is a pseudo-science and not a person; but, taking the hint from De Guilleville's *Pelerinage*, I use the personified figure to cover conveniently the idea of planetary influence as it was considered in the Middle Ages.

³ See Albertus Magnus, *Opera*, IV, 67 (*Ethicorum*, lib. i, tr. vii, cap. vi, quoted in *Smith College Studies in Modern Languages*, III, 199, n. 109); Pico della Mirandola, *Opera*, I, 353 (*In Astrologiam*, lib. iv, cap. ii, "Fortuita à Coelo non Esse"), and II, 373 (*De Rerum Prænotione*, lib. v, cap. viii, "Faturn . . . id est, syderum constitutionem cum quid aut nascitur, aut concipitur, aut inchoatur").

That we fortune clepen so,

There is no doubt that the people of the Middle Ages actually believed in planetary influence.⁴ Fortune, there-

fore, is indeed "executrice" of the "wierdes" that are written in the stars.¹

The distinction between Fortune and the Fates, or between Fortune and Destiny, is more difficult to settle. The abstract word "fate" as embodying the will of God was in the earliest mediaeval times accepted by the philosophers and the Church Fathers;² but as early as Boethius Fate tended to become a changeable, almost a whimsical, force,³ and to approach Fortuna in manner if

not in figure. Mediaeval writers never seem to be quite clear about the distinction between Fate and Fortune; they either blame both figures, or at least confuse the operations of the two.¹ Boccaccio records some attempt among the poets to identify Fortuna with the second sister of the three Fates: "Sono appresso di quelli, che uogliono Lachesi esser quella, che noi chiamiamo Fortuna."² But it is obvious that Fortune was not lost among the Fates; rather, the Fates submitted to her.³

This glance at Fortune's relations with other gods concludes our study of the material dealing with the extent and limits of her power. She is queen; she frequents the court; she controls all mundane affairs and gives all worldly gifts; she is responsible for tragedy in the higher as well as in the more primitive sense of the word; she threatens to dominate the Fates. Only with Nature and Astrology does she seem to share her influence. The problem of one's endowment becomes, therefore, a question of "nature's livery or fortune's star."¹

V

ACTIVITIES

This section will be devoted to the themes that have to do with Fortune's activities and methods of action, and the themes that are related to these topics although not directly connected with them.

Fortune goes on a course of her own. That is, she goes her own way; and, although her route may not be so direct as that of Destiny, it is characteristic of Fortune. We may follow her, she may intercept our paths, she may flee from us.²

As the will of Fortuna was made known by lots at Praeneste, so she is never quite disassociated from *sortes*. In fact, the term appears frequently in accounts of her,

Fortune enjoys exalting and debasing mankind as a game.² She also plays games with human beings, in which they may either win or lose according to their fortune. Of these games the most common are dice³ and

Fortune, subduing mankind, makes sure of her prey by catching her victim in a net. Perhaps this idea is related to the conception of a Fortune of the sea; for man is apparently symbolized as a fish struggling in the weltering sea of life and finally caught by the goddess.⁵

Similarly, Fortune catches men on limed twigs, or snares them as if they were birds. They flutter about in the air until attracted by the luring branches, and then they are stuck in the lime; or she entices and entraps them.⁶ Once having captured men, she puts her bridle

weapons, which seem to be usually arrows, darts, or javelins.¹

Such are the activities of Fortune, and we have traced her steps from game to earnest. These activities obviously suit her character perfectly; for she is just the envious, vindictive creature to throw dice with mankind and shout her laugh of triumph when she wins, to set traps for the sufferer, to snare the unwary, to wage petty warfare on the defiant.

This study of Fortune's activities is by no means complete; other themes will be discussed in connections more appropriate to their particular significance, especially those which are concerned with her dwelling-place and her wheel.

mediaeval writers, but I have taken only the most common examples into consideration. Their customary setting should be observed in passing; for although it is not precisely a literary formula, yet it is so frequently employed in the accounts of Fortune that its importance must be noted here as the chief medium of expression for the tradition of the goddess. This favorite setting is the form of direct apostrophe, perhaps used, especially in the Middle Ages, as a substitute for the prayer of the ancient Roman. At any rate, it is an exceedingly prominent feature in the ritual of the mediaeval cult;¹ probably no other Roman divinity receives so many addresses in this form. And Fortune herself sometimes speaks in reply or in defence.²

Within settings like these come the long, detailed discussions that we have described. The apostrophe, the response of Fortune, the themes themselves, are as a rule delightfully consistent with the idea of a goddess. The confusion with type seldom occurs. Possibly such incongruities in the descriptions as that of two separate faces, or of a face part white and part black, or of one eye laughing and the other weeping, may result from introducing momentarily the idea of the abstraction; but Fortune's smile and frown, her characterization as step-mother and harlot, her amusements and games, are all part of a

splendidly visualized image of the goddess. The astonishing richness of these treatments in mediaeval literature, compared with the accounts in classical times, certainly becomes an argument worthy of attention for the survival of the goddess, at least in the mediaeval imagination.

CHAPTER III

FUNCTIONS AND CULTS

THE philosophy of Fortuna, the various themes and formulae used in describing her, and the literary discussions in general, have brought out characteristics of her nature; but as a rule, unless we have chosen for the moment to draw special conclusions, they have not made clear what are the particular duties of the goddess. We have seen from a study of her gifts what she has in her control, and from a study of her relations with Nature and Astrology what are some of her limitations. It will now be our purpose to discover what are her positive functions.

In considering ancient Rome, I have attained a satisfactory method of procedure, I think, by observing in what connections the goddess is mentioned.¹ There the names of the divisions of the great cult, or of the smaller functionary cults, were already furnished. One can work from the known to the unknown. Already informed as to what the goddess is supposed to do, one can look on while she is doing it. In the Middle Ages we shall have to work in the other direction and formulate the cults of Fortune from the chief activities with which we find her concerned.

In thus using the term "cult," I do not mean to imply that in mediaeval times any formal recognition was given to the separate aspects of the goddess. And yet there was

¹ *Smith College Studies in Modern Languages*, III, 131-177.

recognition of a kind, conscious or unconscious, on the part of the people. My formulation of these interests will have failed if it appears to be random; if, after examining it, the reader is unable to classify almost any allusion to the goddess as discovering her in one of these special functions. My purpose is to make clear that Fortune's duties *suggest themselves* from the passages in question, and that the whole sequence of references to her in the Middle Ages classifies itself automatically in separate lines of successive allusions to the goddess in one or another of these aspects.

The chief cults that I have found in the mediaeval field are these: (1) the Fortune of Love; (2) Fortuna the Guide; (3) Fortune of the Sea; (4) the Fortune of Combat; (5) the Fortune of Fame; (6) Personal Fortuna; (7) Fortuna Publica; (8) the Fortune of Time; (9) the Fortune of Death. All but the last two, it will be observed, cover the work otherwise assigned to Lachesis; the eighth and ninth invade the territory controlled by Atropos. One might object that these divisions comprehend the whole extent of human interest. Love, war, and the sea, someone might say, include about all that man cared for, outside of religion, in the Middle Ages. This is true in a measure. Fortune, when she dominates at all, does dominate in the crises of life, and she appears at important moments. But, after all, these divisions cover definite departments of life; they are not vague classifications including all sorts of related activities. Fortune appears quite specifically in charge of a vessel, she actually turns the tide of war, she borrows the hour-glass from Father Time. Furthermore, the cults "Personal Fortuna" and "Fortuna the Guide" have not so wide a scope even as

that of war or of the sea. We should have no particular right to expect Fortune to *guide*, or to have a personal regard for, the individual. These cults, then, are specialized in their functions. A classification that simply divided life in general according to its activities and then related Fortune's work to those activities would indeed be at once haphazard and hazardous. That such is not the case in the divisions of Fortune's great cult which I have given will appear, I hope, in our present study.

We shall now take up these nine cults and analyze each of them to see its particular application to mediaeval life and its special meaning for us.

(I) THE FORTUNE OF LOVE

The personification, Love,¹ did not give up the control of his own affairs without a struggle. One must not suppose that he was entirely supplanted by Fortune. Sometimes, indeed, it seems as if Fortune got her power in love-affairs, not by replacing the God of Love, but by bestowing or withholding her gifts of riches and glory which would bring the lover to his lady more easily. Why, after all, should Fortune dabble in love-affairs anyway? Perhaps because the character of the God of Love is very much like hers. As early as the eleventh or twelfth century the similarity between Fortune and Love had been recognized in a poem by Hildebert de Lavardin, *De Infidelitate Fortunae et Amoris Mundi*:²

¹ Between the two figures, the masculine and feminine deities, I shall not distinguish. They are the same in function, and were confused in the Middle Ages. See Neilson, *Origins and Sources of the Court of Love*, pp. 26, 27, 36, etc.

² "Worldly love" rather than "love of the world." The poem is in Migne's *Patrologia Latina*, vol. CLXXI, cols. 1423-1424, and is described in *Notices et Extraits*, XXVIII², 352, no. xli.

Both Fortune and Love are faithless. They give no honey without some gall. Fortune raises men and sinks them again. Love blanches and then burns men.

Tempus, amor, fortuna rotam comitatur euntem,
Casus illa rotae, temperat illa vires.
Stante rota fortuna fauet; cadit haec, premit illam.

Love changes and nourishes sighs; Fortuna begets fear. Joy is the beginning, grief the end, of both. Both turn darkness into day and day into darkness. Cares accompany them both, and with them go tears, labor, and groans. Their honey contains poison. Neither deity is true. Some men are broken by one, and some by the other.

But some writers make a distinction between Love and Fortune, representing one as obstructing the work of the other, or making them at odds somehow, or at least not in complete union.² So

'tis a question left us yet to prove,
Whether love lead fortune, or else fortune love.³

And the lover asks Fortune, "Che hanno le cose d'Amore a fare con teco?"³

O Amor, o Fortuna, o Libertate.

³ Boccaccio, *Fiammetta*, v (*Opere*, VI, 104 f.).

Fortune and Love become associated in work, however. They are both accused of causing trouble for lovers, and their names are linked.¹ In *Li Romanz de la Poire*, Amors, seated before the throne of Fortune, tells how lovers are treated by the goddess:

Celui qui leaument eime, celui ai chier
Et le voil hautement entor moi aluchier.
Mes li fax qui me ment et me sert de trichier,
De la roe vilment l'estuet jus trebuchier.

Fortune sanz reproche fet tot quanque je loe.
Cels que de mon dart toche, met en haut sor la roe,
Et s'autres i aproche, Fortune le descroe
Et estendu le coche tot envers en la boc.

Fortune then gives an account of her usual characteristics and tells how she casts men down. Those who are faithful in love suffer no injury.²

Here the Court of Love has become practically the Court of Fortune, and clearly Fortune is in chief power:

says Love. In the *Panthère d'Amours*,² and in the *Kingis Quair*,³ Fortune seems to be in complete control. Cases of love are finally referred to her decision, and the Court of Fortune appears to be an established fact.

Perhaps Fortune earliest takes over the complete management of a love-affair in the case of Abélard and Héloïse, and here she assumes her powers with a burst of splendor. She has parted the lovers, as she often does, and so they suffer. Héloïse writes:

O si fas sit dici crudelem mihi per omnia Deum! o inclementem clementiam! o infortunatam fortunam, quae jam in me uniwersi conaminis sui tela in tantum consumpsit, ut quibus in alios saeuat jam non habeat; plenam in me pharetram exhaustit, ut frustra jam alii bella ejus formident. Nec si ei adhuc telum aliquod superesset, locum in me uulneris inueniret. Unum inter tot uulnera metuit, ne morte supplicia finiam. Et cum interimere non cesset, interitum tamen quem accelerat timet. O me miserarum miserrimam! infeliciū infelicissimam, quae quanto uniuersis in te feminis praelata sublimiorem obtinui gradum, tanto hinc prostrata grauiorem in te et in me pariter perpressa sum casum! Quanto quippe altior ascendentis gradus, tanto grauior corruentis casus. Quam mihi nobilium ac potentium feminarum fortuna unquam praeponere potuit aut æquare?⁴

Here indeed are the slings and arrows of outrageous Fortune! From this time on, Fortuna is found meddling more or less in love-affairs.⁵

Thou dost give and thou dost take away. But while I was still young and knew not what a great part thou dost hold in the rule of love, thou, "delle passioni dell' anima donatrice," didst make me enamoured as thou didst wish; I fell in love with that youth, whom only thou put before mine eyes, at the moment I thought myself to

be furthest from loving. When thou feltest me bound indissolubly in heart, thou, unstable one, soughtest to make the pleasure of my love noisome to me. Sometimes hast thou subdued the spirit with vain and tricky deceits, and sometimes subjected the eyes to thee; for our love published abroad could do no harm. Oftener, as thou didst wish, ugly words of my lover came to mine ears, and some from me went to him, to create hatred between us. But is the virtue of the mind subject unto thee? Cannot our wisdom prevail over thee? What can aid against thee? Thou hast a thousand ways to harm thine enemies, all of them deceitful. I thought I was secure. If I were young, I might have defence now. Thou hast not kept to thine own fields, but hast put thy scythe into another's grain. What have the things of love to do with thee? Thou gavest me treasures, riches, fields — why not extend thy wrath to these bounties? Thou hast left me these which are of no avail to console me. If ever thou hast been pricked with the arrows of love, thou mightest offer counsel. All are happy but me. My name is a by-word among the people who once told the fame of my beauty. Begin to have pity on me, since I yearn to praise thee, to honor thy majesty. At the hour thou turnest back to greet me, I shall put up my statue with a tablet, saying, "This is Fiammetta, called by Fortune from deepest woe to greatest happiness." It will be seen by all.¹

As we see here, Fortune is generally at the last unfavorable to one or both of the lovers. She is hard-hearted, envious, positively hostile, and torments them.² It was

Thus Fortuna actually does or undoes the work of the God of Love. We may remember that in many ways her traits, as depicted in the preceding chapter, resemble those of the love deity. Fortune is blind, and slings arrows or darts at her victims.³ These divinities, Fortune and Love, become sufficiently identified for Venus to take over the characteristics of her sister goddess, and by the time of *Les Échecs Amoureux* we find Venus turning a wheel and exalting and debasing mankind:

We may agree with Gower:

For if ther evere was balance
 Which of fortune stant governed,
 I may wel lieve as I am lerned
 That love hath that balance on honde.²

In Lydgate, too, the confusion is striking.³

The association between Venus and Fortune might be studied even further. Fortune's house is often in the midst of a stormy sea; Venus "fleteth in a se,"

To schewe þe trowble and adversite
 þat is in Love, and his stormy lawe,
 Whiche is beset with many sturdy wawe,
 Now calm, now rowe, who-so takeþ hede.⁴

This identification of the two figures of Fortune and Love only means that they had very much in common,[†] and that in one aspect Fortune was certainly regarded as concerned with the affairs of love.

[†] For the association of Love and Fortune in Elizabethan times, see Turbervile's poem on "A Controversie of a conquest in Love twixt Fortune and Venus" (*Epitaphes, Epigrams, etc.*, 1567, ed. J. P. They moderate each other: the Wheel of Desire is moderated by the Wheel of Temperance, and so on. See also Fortune's chain and that of Venus. See Chaucer's *Frankleyn's Tale*, ll. 1355-1358. Cf. Seneca, *De Tranquillitate Animi*, x, 3: "Omnes cum fortuna copulati sumus; aliorum aurea catena est, aliorum laxa, aliorum arcta et sordida. (2) FORTUNA THE GUIDE

The theme of "Fortune's course," mentioned in the preceding chapter,¹ suggests that to attain any gift of Fortune we must follow her though she flee. The same idea is found in the conception of Fortune as leading mankind on a way of her own choosing, and so giving men the various adventures they experience. Fortune, and not Reason, thus becomes the guide of life. It is presumed that her course will not be direct or easy to travel. Sections of the journey, as it were, are found in the various slight allusions to her in the process of so conducting affairs that man gets into certain pleasant or unpleasant situations. There are many such references, in which she is responsible in one way or another for *bringing* man into some particular place or set of circumstances.² A man who is walking comes into a wood by chance, or he is lost, or somehow the direction of his steps is taken out of his own hands.

Fortuna "guida," "ha condotto," "mena," "demainne," or "leads."² She is often found guiding one across the sea, and this particular task of hers³ leads us to the study of the next cult.

(3) FORTUNE OF THE SEA

Dictys Cretensis, describing the wanderings of Ulysses, who after all was chiefly a romantic adventurer, says, "Adpulsusque ad Lotophagos atque aduersa usus fortuna deuenerit in Siciliam."¹ The sea-figure, comparing life to a sea and one's career to a vessel of which Fortune is in charge, is used with such great frequency in discussions of the work of Fortuna that it becomes a theme of unusual importance. In Boethius, for example, we find the following statements:

Si uentis uela committeres, non quo uoluntas peteret, sed quo flatus impellerent, promouerés. . . . Fortunae te regendum dedisti, dominae moribus oportet obtemperes.²

Nondum est ad unum omnes exosa fortuna nec tibi nimium ualida tempestas incubuit, quando tenaces haerent ancorae quae nec praesentis solamen nec futuri spem temporis abesse patiantur.³

Life is, therefore, a sea of trouble stirred up by Fortuna, and with our light skiff we venture on its waves.⁴

As in the case of Fortuna the Guide the goddess enjoys leading people about, so here she takes a position at the helm and guides the ship. She turns it, conducts it through the storm, and brings it into a good or a bad port.¹

Sometimes her method of guiding the ship is by controlling the winds: one abandons the sails of one's ship to Fortuna,² and she directs them.³ Fortune is called "ven-

tosa.”¹ In the figure of the type, as we have seen,² Fortune is herself blown by the winds. In the symbolic figure she and the winds are apparently in close conspiracy with each other — both are mentioned as if concerned with the same work:

E guidato dai venti,
E la fortuna che volge in sua via.³

And then we read of the actual “winds of Fortune” which she sends to the ship;

Oimè! Fortuna, non mi stare addosso;
Abbia pietà di me, che più non posso.
Tempera omai i tuoi venti crudeli,
E non isconquassar più la mia barca.⁴

In control of the winds, she sends mist and fog. As early as the tenth century Gerbert of Aurillac complains, “Sed

Le plus maudit de tout le monde.

The Christian Fortune makes a gracious guide on the sea.
Thus Fortune controls affairs of the sea,² and it is she

¹ *Gerusalemme Liberata*, XV, iii-vi (*Opere*, XXVI, 4 ff.). The omitted stanza is on the change of her colors, like the changing lights in the down of a dove. On page 5 a note to stanza 3 says, "Anche il Tasso in una delle *Lettere inedite* dichiara esser questa la Fortuna."

² For the idea in art, see Fortune with a sail in the *Mirrouir of Maïestie*, pl. 23 (after p. 63; note the inscription); Cousin, *Livre de Fortune*, plates 1 (ship in the background), 63 ("Fortune amenant la Tempête"), and cf. plates 49, 61, 143 (anchor), 157, 161; Fregoso, *Dialogo di Fortuna*, title-page (Fortune walking on the water with sail blown by the wind). La naue è la vita nostra mortale, la quale ogn' huomo cerca di condurre à qualche porto tranquillo di riposo; la vela, e l'albero spezzato, et gl'altri arnesi rotti, mostrano la priuatione della quiete, essendo la mala fortuna vn successo infelice, fuor dell' intedimento di colui che opera per elettione." who sends the calm or the storm. In none of the passages cited is there a confusion of the goddess with the Italian abstract "fortuna," the literal meaning of which is "storm"; but may it not be possible that that Italian word of special meaning was derived from the abstraction "fortuna" which includes the gifts of our "fortune of the sea"?¹ At any rate, it is quite clear that we are justified in considering the goddess as much concerned with mediaeval ventures on the ocean. She it was whom the sailor thought of at the beginning of his great voyages of traffic and discovery.²

(4) THE FORTUNE OF COMBAT

Pico della Mirandola, in his philosophic mood, speaks of "fortuna quae in rebus bellicis plurimum dominatur."³ To this comment Jean de Meun adds a cynical touch: "Bataille, en coi fortuna seult plus avoir de pooir que vertus."⁴ The author of the *Complaynt of Scotlande*, who

¹ Du Cange's earliest reference to the "fortuna" which means storm is in a document of 1242 ("Bartholom. Scribae Annal. Genuenses ad ann. 1242"). There I find the expression ambiguous, as meaning possibly either the goddess or the storm: "Continuo ualida Fortuna maris, et uenti, et pluuiae regnare," etc. Du Cange also cites "Bernhardus de Breydenbach, Itiner. Hierosol., pag. 14," as saying, "Nisi forsitan tempestas maris, Fortuna appellata, id faciendum persuaderet." But this document is of the late fifteenth century.

² The shifting from a figurative to a literal "sea" and back again in these passages need not cause worry. The figurative could not have arisen without the literal idea. The "sea of life" and its "storms" came, of course, from actual experience of the sea and its dangers. The goddess, guiding the vessel in the sea of life, must have come from the idea of the goddess guiding the real vessel on the sea. At any rate, see the non-figurative uses above, p. 102, n. 1; Masuccio, *Il Novellino*, p. 257; Benoit de Ste. Maure, *Roman de Troie*, IV, 285, ll. 28412 ff.; Gower, *Confessio Amantis*, viii, 1320; Lydgate, *Troy Book*, ii, 3392 f., etc.; Dictys Cretensis, *Belli Troiani*, VI, v (quoted above, p. 101).

elsewhere in his work denies Fortune any reality, tells us that "battellis consistis vndir the gouernance of fortune, ande nocht in the ingyne of men."¹ Thus Fortuna threatens to supplant even Mars and Bellona.² She not only wages her own private war with man, but she sits in judgment on the battles of men amongst themselves.

Fortune brings enemies together to provoke a fight.³ She shows herself completely unfavorable, and sometimes causes the downfall of one particular side;⁴ but she is

peace.¹ In these ways Fortune lives up to her reputation of having particular power in warfare and combat.²

(5) THE FORTUNE OF FAME

Since Fortune sends victory in warfare to one side or the other, since her gifts include dignities most conspicuously, and since on her depends success in various kinds of achievements, she is therefore much concerned with the bestowal of fame. She and Fame are at all times closely associated, but sometimes she appears actually doing the work of Fame.³

Boccaccio requests Fortuna that his book be not obscure among men: "Et quod obscurum praesentibus nomen meum est, tuo illustratum fulgore clarum apud posteros habeatur."¹ In place of Fortune's handmaids "Wealth" and "Honors," whom Boethius notes,² Gower refers to her servants Renomée and Desfame, who fly faster than the swallow, bearing news of her court, to-day fair news, to-morrow ugly; each has a big horn suspended from her neck, and these horns they sometimes exchange.³ Chaucer, in the *Hous of Fame*, describes his figure of Fame with many of the expressions familiar in the tradition of Fortuna and with much of her apparatus. He gives Fame two trumpets of good and evil rumor respectively. In translating *De Casibus*, Lydgate adds the figure of the two trumpets and the house of Fame, and attributes these to Fortune:

Principio scire fortunam seu stabilire,
Non est humanum super hoc quid ponere planum.

Contrast Alex. Montgomerie, *Poems*, 1887, p. 97 (xvi, 5-6):

In spyt of fortun, I shall flie with fame;
Sho may my corps, bot not my curage kill.

See Dante, *Inferno*, xv, 70 f.; Petrarch, *Rime*, ed. Albertini, II, 298 (son. xiii); Boiardo, *Orlando Innamorato*, II, xi, 35. In Frezzi's *Quadriregio*, lib. ii, cap. x (I, 134, ll. 1 ff.), "la falsa Opinon" is described with an appearance very much like that of Fortune. See, e. g., in her speech:

Io fo povero alcun nella ricchezza;
E fo la povertà allegra tanto,
Ch' alcun la porta, e nulla n' ha gravezza.

See also Machiavelli, *De' Discorsi*, lib. iii, cap. xxx (*Opere*, V, 128); cf. Gower, *Confessio Amantis*, iv, 1763.

In which processe thou dost gret diligence
 as they deserue to yewe them thanke or blame
 Settest vp one in royal excellence,
 within mine house called the house of fame
 the golden trumpet with blastes of good name,
 Enhaunceth one to ful hye parties
 where Jupiter sitteth among the heuenly skies.

Another trumpet of sownes ful vengeable
 which bloweth vp at feastes funerall,
 Nothing bright, but of colour sable,
 Farre fro my fauour deadly and mortall,
 To plunge princes from their estate royal,
 whan I am wroth to make them loute lowe
 Than of malice I doe that trumpet blowe.¹

Pierre Michault gives two similar trumpets to Eur and Maleur.²

Thus Fortune is never quite free from the charges of those who are discontented with their fame. As her gifts include glory, so we find her pretty much responsible for our reputation, good or bad.

(6) PERSONAL FORTUNA

The idea of having a peculiar cult of one's own Fortuna seems to have been a favorite at all periods. I do not refer merely to what is likely to constitute our idea of one's personal "fortune" in the abstract sense, but to the conception of a tutelary goddess who is particularly interested in one, and who dispenses to one her bounties or withholds them. In the *Morgante Maggiore* we hear the

¹ *Fall of Princes*, VI, i, stanzas 16-17 (1554 ed., fol. cxliii^{vo} f.; 1558 ed., fol. cxxiv^{vo}).

² *La Dance aux Aveugles*, pp. 30 f. Eur stands on a high pillar, with a trumpet of silver; Maleur is "au plus bas du trosne," holding an old worn-out wooden one mended with strings.

FORTUNE AND SAPIENCE

cry, "O mia fortuna, ove mi guidi o meni?"¹ And in the *Confessio Amantis* we read:

For whan mi fortune overcasteth
Hire whiel and is to me so strange,
And that I se sche wol noght change,
Than caste I al the world aboute, etc.²

The goddess referred to here is certainly personal.³ Very possibly it was her vogue in this cult which spread the use of the abstract "my fortune," meaning "what my Fortune brings me."

(7) FORTUNA PUBLICA

As the individual believed that a particular Fortune took his case into consideration, that a particular aspect of the goddess had influence over his life, so he held that a special aspect of the goddess held sway over the city and over the state.

The Fortune of the city is certainly uppermost in the laments concerning the destruction of Milan.⁴ Florence is

Quicquid Roma potens, rota mendacissima strauit.

subject to Fortune's sway; ¹ so also are Rome ² and Syracuse. ³ Troy is naturally the most familiar example of the goddess's infidelity:

E quando la fortuna volse in basso
L'altezza de' Troian che tutto ardiva,
Sì che insieme col regno il re fu casso,

says Dante. ⁴ Thus she caused the greatest of all civic tragedies famous in the Middle Ages. ⁵

Not only is Fortune the goddess of the city, but she is also the goddess of the people of the city, and, indeed, of the community. ⁶ So she becomes the Fortune of the state, and we hear of "l'Italica fortuna" ⁷ and "la Fortuna degli Spagnuoli." ⁸

Non te pretereat populi fortuna potentis

(8) THE FORTUNE OF TIME

Fortune and Time are frequently named together and are apparently associated.¹ Both give blows, become contrary, raise and ruin.² Fortune actually does the work of Time, as we see in such phrases as these: "se la fortuna fa passare il tempo di dieciotto anni";³ "fortuna . . . Volgendo gli anni nel suo corso lieve";⁴ "ella varia i tempi":⁵

And lat Fortoun wirk furthe hir rage;
Quhen that no rasoun may assuage,
Quhill that hir glas be run and past.⁶

Thus Fortuna has a glass, and in one drawing she has, like Father Time, a scythe.⁷

Controlling times and seasons in this way, Fortune may easily come to represent the goddess who is in control of

⁷ Cousin, *Livre de Fortune*, pl. 179 ("Fortune tenant un Rasoir"). See a drawing of Time on a wheel, holding a razor and labelled "Occasio," in John Gau's *Richt Vay*, p. 110. As to whether Cousin's "Rasoir" is really a razor, and whether the figure in Gau's book really represents Occasio, see discussion in the text above the drawing. See Cousin, pl. 17.

the opportune moment. Studies of Matzke and others have shown the growth of the confusion between Occasio and Fortuna, from the distichs of Cato according to Élie de Winestre and Everard down through the works of Politian and Boiardo.¹ This mingling of ideas is represented by the symbolic arrangement of the hair. Fortune, standing for Occasio, has a long forelock, while the back of her head is bald. The forelock one must seize in order to prevail upon the goddess before she slips away:

Ha! Perceval, fortune est cauve
 Derrière et devant chevelue.
 Maudehait ait ki te salve
 Et ki nul bien te viut ne prie.²

So much for the symbolic description.

¹ It would be hard to add to the lists of passages collected by these scholars. See J. E. Matzke, *Source of "To Take Time by the Forelock,"* Mod. Lang. Assoc., Publ., VIII, 303 ff.; G. L. Kittredge on the same subject, *Modern Language Notes*, VIII, 230 ff., and IX, 95; also Karl Pietsch, *ibid.*, VIII, 235 ff. For the confusion with Death, notice Matzke above, p. 331; and see the confusion of Ventura with Occasio in Andrea Calmo's *Lettere*, ed. Rossi, p. 450 ("dietro ch'alua e-cchol cuffetto inn alto," etc.).

A8 (on a ball); see the *Dream of Poliphilus*, ed. Appell, fig. 5 (at the top of a temple to the sun is a winged female figure, with cornucopia and floating robes, and what seems to be a long forelock. "This figure is made so as to turn with the slightest breeze.") See Cousin, *Livre de Fortune*, pls. 15 ("L'Occasion de la Fortune"), and 17 ("La Fortune ou le Dieu de l'Occasion"); Bocchi, *Symbolicae Quaestiones*, symb. li (a naked figure with a forelock, being lifted from the sea; note the inscription). See reference to these or similar figures in art by Simund de Freine, *Roman de Philosophie*, ll. 291 ff. (and observe Matzke's note, p. lxxviii). Also cf. Bocchi's symbol lxxi.

The spirit of this fusion of ideas is found in various passages in which we see Fortune doing the actual duties of Occasio and comporting herself in the manner of the lady of the unique coiffure. Sacchetti puts it thus: "Così fa tutto di la fortuna, che molte volte si mostra lieta, per vedere chi la sa pigliare; e molte volte chi meglio la sa pigliare, ne rimane in camicia . . . chi non piglia il bene, quando la fortuna e' l tempo gnel concede, il più delle volte, quando si ripensa, il rivorrebbe, e non lo ritrova, se non aspettasse trentasei migliaia d'anni."¹ Thus Fortune is goddess of time in general and deity of the lucky moment.

(9) THE FORTUNE OF DEATH

Watriquet de Couvin says that Eürs and Fortune are afraid of only one conceivable creature on this earth, and that is Death.² But Death and Fortune at an early period are found coöperating quite amicably, with little distinction between their work.³ Sometimes a trio is formed in

Before the time of Watriquet de Couvin, indeed, Fortune had actually invaded the territory of Death and taken over his special prerogatives. In one of the minor Latin poets, probably of the period after the Golden Age but before the real opening of the Middle Ages, we read: "Haec [Fortuna] aufert iuuenes ac retinet senes."² Antithesis of a similar kind is found in a French *dit* of a much later period, which includes a description of a man who trusts in her, a "*Fols-s'i-fie*":

wheel sends men into the grave.¹ Hence it is not going too far to say that Fortune succeeds in sometimes usurping the place of Death in the thought of the Middle Ages. Some hints as to her methods of causing death are furnished us in the theme of illnesses which she brings, and in the reference to her causing a man to be hanged. Fortune deforms, gives distemper, or brings on a fever;² and she may lead one to the gibbet.³

(10) OTHER CULTS

The "Fortune of Abundance" in Ancient Rome may be regarded as surviving in the general idea of Fortune the giver, the bestower of riches; but, on the whole, the lavishness of the goddess does not receive so much attention in the Middle Ages as does the naming of her gifts. We know that she gives, but authors spend more of their time in complaining about her reluctance to give. She appears frequently in art with her symbol, the cornu-

Bona and Mala Fortuna survive clearly enough in favorable and unfavorable Fortune.³ Perhaps in Gower's line, "Tho was the fortune of prouesse,"⁴ we have the idea of Fortuna Virilis! In the Fortune who limes or snares we have possibly a reawakening of the idea of Fortuna Viscata.⁵

Such are the principal divisions of the great cult of Fortuna during mediaeval times. To all intents and purposes Fortune has become the goddess of love, of the sea, of combat, and of fame, the deity of the individual, of the city and of the state, of time and of death. She is the bestower, and she is sometimes kind and sometimes unkind. Let us turn back for a moment to the cults in the period of the Empire in Rome.⁶ There we find the following classification sufficient to cover practically all the

specialized cults of the worship of Fortune during her most flourishing period: *Fortuna Bona* and *Mala*; Fortune of the city; Fortune of love; *Fortuna Dux*, Fortune of the sea (the goddess behind the storm, or the deity who guides the vessel if we include *Fortuna Dux*); Fortune of the individual, of war, and of fame. The parallel of the cults is striking enough in itself without further comment.

It may be objected, however, that in the Middle Ages we find merely the evidence of Fortune at work, whereas in Rome we have the established cults themselves; and that the comparison of Fortune's functions with her cults is arbitrary and misleading. In answer to such an objection I may say that I have compared her duties and activities in Rome, as inferred from her cults and from the passages in which her work is described, with her similar duties and activities in later times, and I have suggested that, although these duties were not formally prescribed or labelled during the Middle Ages in the manner of officially accepted worship, yet they themselves suggest the survival of the older cults in spite of public disapproval. The worship was stamped out, the temples were in ruins; but the force of the old cults remained alive, and, like a spirit among the ruins, Fortune continued to guide on land and on sea, to arbitrate in the clash of warfare, to bestow the laurel wreath, to bring lovers into each other's arms, and to lead her devotee with particular attention through hours and days, until she saw fit to borrow the shears from Atropos and snip his thin-spun thread of life.

CHAPTER IV

THE DWELLING-PLACE OF FORTUNE

IN the literature of ancient Rome there are few, if any, hints for the description of Fortune's dwelling-place. She dwelt naturally with the other gods, and this home did not take the form of an actual house. Her temples might have offered some suggestions, but apparently they were not conceived under any symbolism which would carry out the allegory of the goddess. Of course, mediaeval writers always tried to be allegorical in depicting her. Some material concerning palaces fit to be the residence of Fortune may be found in the study of the palace of Venus in the Court of Love,¹ but the passages containing such details seem to have had little influence on the conceptions of Fortune's castle.

There is one description of the abode of Venus, however, which has possibly contributed some ideas. Claudian (fl. A.D. 400) tells us in his poem *De Nuptiis Honorii et Mariae* that the home of Venus is in a flat plain, on the top of a mountain which man cannot climb. The place is enclosed by a golden wall. It is not subject to storms of wind or snow; but perpetual spring reigns, flowers bloom, and birds sing continually. Two fountains are there, one sweet and one bitter, in which the arrows of Cupid are tempered. The palace where Venus is enthroned is a

¹ Neilson, *Origins and Sources of the Court of Love*, pp. 11 ff.

scene of splendor, built of precious stones and other rich materials. In it dwell various divinities besides Venus and her son — Licentia, Irae, Excubiae, Lacrymae, Pallor, etc.¹ In this summary of Claudian's description the important elements to note are (1) the inaccessible mountain; (2) the garden, here not exposed to storms of any kind; (3) the fountains of sweet and bitter liquid; (4) the sumptuous and brilliant palace; (5) the court.

These details are strikingly similar to some of those assigned to the dwelling-place of Fortune in mediaeval times as we shall see it later depicted; but without some further construction the symbolic meaning of the picture is not satisfactory for the cult of Fortune. Boethius gives us an account of a house that suits the inconstant character of the fickle goddess, when he offers us advice about the kind of figurative abode which we who seek security should avoid:

Quiquis uolet perennem
 Cautus ponere sedem
 Stabilisque nec sonori
 Sterni flatibus euri
 Et fluctibus minantem
 Curat spernere pontum,
 Montis cacumen alti,
 Bibulas uitet harenas.
 Illud proteruius auster
 Totis uiribus urget,
 Hae pendulum solutae
 Pondus ferre recusant.
 Fugiens periculosam
 Sortem sedis amoenae
 Humili domum memento
 Certus figere saxo.

¹ See Claudian, *De Nuptiis*, ll. 49 ff. A summary of the description appears in Neilson's *Court of Love*, pp. 15 f.

Quamuis tonet ruinis
 Miscens aequora uentus,
 Tu conditus quieti
 Felix robore ualli,
 Duces serenus aeuum
 Ridens aetheris iras.¹

Here the lofty mountain becomes an exposed and particularly dangerous site for a dwelling,² and all the more so if it is surrounded by the sea. The hill is swept by a gale, and, perhaps because of its pride in comparison with the modesty of the "humili saxo," it all the more tempts the gods to smite it. One might object that this is a peculiarly risky location for even the goddess of chance to select for her permanent home; but, as I have shown elsewhere,³ the Fortune who first chooses this scene for her activities is the abstraction personified and not the goddess, the type and not the symbol. In other words, worldly possessions rest on a shaky foundation and are exposed to the winds of adversity, which naturally the réal goddess could not suffer.

¹ *Cons. Philos.*, II, met. iv: "He that would build on a lasting resting-place; who would be firm to resist the blasts of the storming wind; who seeks, too, safety where he may condemn the surge and threatening of the sea; must leave the lofty mountain's top, and leave the thirsting sands. The hill is swept by all the might of the headstrong gale; the sands dissolve, and will not bear the load upon them. Let him fly the danger in a lot which is pleasant rest unto the eye; let him be mindful to set his house surely upon the lowly rock. Then let the wind bellow, confounding wreckage in the sea, and thou wilt still be founded upon unmoving peace, wilt be blessed in the strength of thy defence; thy life will be spent in calmness, and thou mayest mock the raging passions of the air" (trans. W. V. Cooper, Dent ed.). For the suggestion of this passage, see Galpin, *Mod. Lang. Assoc.*, *Publ.*, XXIV, 337 f.

² Note, too, the emphasis on the danger of the "bibulas harenas," with obvious Scriptural reference.

I

The first actual account of the house of Fortune was given in the twelfth century by Alanus de Insulis, in his poem the *Anticlaudianus*. His description runs as follows:

In the midst of the sea there is a cliff, which the water lashes continually and with which the wave disputes and has strife. This cliff, beaten in various wise and smitten by continual movement, is now fully buried in the waves; again, rising from the sea, it breathes the upper air. It does not retain its shape. Each moment various changes transform it. Now it is covered with flowers and Zephyr breathes upon it; again, Boreas cruelly destroys all the flowers. There are trees of diverse nature. One remains barren, the other brings forth fruit. One rejoices in new leaves, the other "rest of leaves doth weep." One is green, more are sere. One blooms, the others are flowerless. One rises high, the others sink to earth. One has increase, the others waste away. The laurel wanes, the myrtle gives fruit. The olive is dry, the willow bears. Here thorn-thickets, armed with their darts, threaten wounds, and the shaggy yew hurts the hands as it leaps up. Seldom sings the nightingale. The owl, messenger of adversity, prophesies dire events.

Here two streams flow, different in source, in appearance, and in taste. One has a very sweet liquid. With its honey it seduces many, and they that drink the waters thirst for more. Numberless drinkers it afflicts with the dropsy. With gentle murmur it sports along and flows past the cliff. Men desiring more of it plunge in, to bathe all their limbs in its tide. Submerged as they are, the stream carries them along until the fickle wave bears them again to land. The other stream is dark and sulphurous. Its color confounds the sight, its savor the taste, its rush the ear, and the nostril wearies of its insipid odor. On the banks rivers of tears drown many who fear to plunge into the torrent. The stream carries along a great throng, to bury them in its floods. Now it sucks some down, and now it spues them forth. This stream joins the sweet one and compels it to become cloudy and bitter.

The house of Fortune is suspended on the steep cliff and threatens to fall. It suffers all the tempest of the winds. Part of the building swells upon the hill, the other part slopes down to the bottom of the valley as if ready to sink there. One part gleams with silver and

sparkles with gems, the other part is squalid with cheap material. One part stands proud with a lofty roof, the other part gapes with an opening. "Here Fortune hath a dwelling-place, if ever yet any unstable thing abideth anywhere, if any moving thing doth cease to move."¹

Here we have the full description of the house, and we may note the following details: (1) the scene is apparently laid on an island; (2) the house is situated on a lofty cliff, an elevation of land; (3) it suffers the winds² of both Zephyr and Boreas; (4) the garden has both fruitful and barren trees; (5) it has two streams, one sweet, one bitter; (6) the house is constructed partly of rich material and partly of cheap. We may see the similarity of this abode to that of Venus in Claudian's poem, and yet the contrast is striking. In Claudian everything is pleasant, peaceful, and enduringly comfortable; in Alanus half of Fortune's house is forbidding and perilous.

As I have elsewhere observed,² Jean de Meun took over this entire description from Alanus and put it into the *Roman de la Rose*.³ Petrarch refers to the account of Alanus when he says:

Fuor tutt'i nostri lidi
Ne l'isole famose di Fortuna,
Due fonti à: chi de l'una
Bee, mor ridendo; e chi de l'altra, scampa.⁴

The details are reproduced again in Taillevant's *Régime de Fortune*:

Sur lac de dueil, sur riuere ennuieuse,
Plaine de cris, de regretz, et de clains,
Sur pesant source et melencolieuse,

¹ *Anticlaudianus*, VII, viii-ix, and VIII, i (Migne, vol. CCX, cols. 557-560).

Plaine de plours, de sospirs, et de plains:
 Sur grans estanz d'amertume tous plains,
 Et de douleur sur abisme parfonde,
 Fortune là sa maison tousiours fonde
 A l'vng des lez de roche espouventable,
 Et en pendant, affin que plustost fonde,
 En demonstrant qu'elle n'est pas estable.

The house is partly rich, partly poor; on one side are barren fields, on the other grain and fruit. There sits Fortune surrounded with abundance; and so on.¹

The French tradition, which begins with the *Roman de la Rose* and continues in the *Régime de Fortune*, appears again in Lydgate's *Disguising at London*, where, with an acknowledgment of indebtedness to the *Roman*, the author speaks of Fortune's dwelling. He says it is on a barren rock. On one side is a little mountain "lyke an yle," on which grow fresh flowers, trees, and fruit; birds sing there and "Zepherus" makes the weather clear. But suddenly comes a wave that causes everything to fade. Fortune's hall is located there: one side is rich with precious stones; the other, in ruins, is daubed with clay. As Fortune's house is "unstable," so she is "deceyvable."²

The descriptions thus far owe most of their material ultimately to Alanus, who in turn found some hints in his predecessors: (1) literal detail of scenery in the Court of Love, and most of all in Claudian (with, however, the symbolic fountains); (2) symbolic suggestion and symbolic detail in Boethius. The points to note in the tradition from Alanus are chiefly these: (1) the island, (2) the mountain, (3) the garden, (4) the palace, (5) the court.

The court grows out of the conception of the goddess as queen of the household, and so is added here.

II

THE ISLAND

The symbolic idea of the island in the accounts of Fortune's home is clearly that of the remoteness and inaccessibility of the desired fortune. It is covered with the glamour that always plays about the mental picture of a distant and particularly delightful region. In Roman and mediaeval times, travellers on sea often came home with tales of some island recently discovered, where the climate was wonderfully pleasant, where the sun shone more gently than anywhere else, where strange and delicious fruits grew, and where life was as sweet as the waters of a certain fountain which bubbled there. Such discoveries are rarer nowadays, when the world is entirely charted and when school geographies can tell the "products" of any far-off point of land; but that this was not always the case is the happy fact to which we owe such ideas as the "Isles of the Blessed" and the "Beautiful Isle of our Dreams."

Whether island or not, however, the desirable country has nearly always been bounded in some way by water. The suggestion may come as I have described; or some such conception as that of the "river Jordan" may spring from a certain physiological fact which is often noted — that at the approach of death the sufferer hears "the sound of many waters" in his ears and tells the people about him of the queer noise. Perhaps this sensation is caused by the circulation of the blood pulsating against

the sensitive nerves of the ears. However this may be, in death and at other times the barrier of water generally seems to separate us from the desired country; and so we hear of Atlantis, Avalon, the Isles of the Hesperides, the Isles of the Blessed, the Isle of Joy, the Isle of Ladies, the Happy Isles, and so on. The idea is familiar in the folk-lore of many parts of the world.¹

More obviously related to our topic are the so-called Fortunate Isles, famous in classical and mediaeval times.² Whether they were islands of real or of imaginative experience is of no importance for us here. Perhaps some sea-rover actually happened on the Canary Islands (or others), and found them enjoyable enough to call "Fortunate." At any rate, the Fortunate Isles became a classic example of the longed-for realm. Plutarch describes them;³ Dante refers to Orosius's account of them;⁴ Vincent of Beauvais gives some space to his comment on them, and says, "Propter soli fecunditatem easdem paradisum uocauerunt."⁵ These islands have by reputation a delightful climate, abundant fruits, and indeed everything a person could wish. As Aeneas Sylvius puts it:

¹ See Nutt, *The Happy Otherworld*, in *The Voyage of Bran* (ed. Meyer and Nutt), I, 148, 271 ff. So, too, in *Pilgrim's Progress* a river encircles the Celestial City. Milton speaks of enchanted islands (*Comus*, i, 50, 517), refers to Eden as "the happy isle" (*P. L.*, ii, 410, and cf. iii, 567, 570), and says the world itself was "built on circumfluous waters calm" (*P. L.*, vii, 269-270). The mediaeval castle was surrounded by a moat filled with water as a safeguard against intruders; but the idea of the happy island is far older than the Middle Ages. Further material is afforded in my article in the *Mod. Lang. Assoc., Publ.*, XXXIII, 627 ff., and in the notes appended thereto.

THE DWELLING-PLACE

Eae insulae cum saluberrimum aërem haberent, et frugibus abundarent: loca uero incontinenti opposita, propter diluuii humiditatem, pestilentia et frugum sterilitate laborarent, Fortunatae sunt cognominatae.¹

Islands like these, existing in the popular idea of the world and clearly very well known, would surely have had some influence on an author's description of Fortune's residing-place. She is, I think, described as living on an island because (1) the mythical idea of the country of abundance and riches, or the desired region of whatever kind, usually took the form of an island, and because (2) there was a belief in some actual islands that bore as their name a derivative from the name of the goddess.

The idea of an island is elsewhere associated with Fortuna. De Guilleville puts Fortune and her wheel out in the sea like a floating rock or a Charybdis.² As the pilgrim is swimming along, he sees in the water ahead a great tree standing upright:

Et cuiday quen vne ysle fust
Du que tout oultre la mer fust.

This tree proves later, as we shall see, to be a property of the goddess.

The house of Boiardo's Fata Morgana is on territory

² *Romant des Trois Pelerinages*, fols. lxxvj^{vo}-lxxvij^{vo}. There is a colored drawing of this idea (marked F), in Nathaniel Hill's *De Guilleville*, opp. p. xlii; also a woodcut, xvii, opp. p. xlv. See the wheel half-submerged in water in Van Staveren's *Auctores Mythographi*, 1742, frontispiece. Here the symbolic significance of the water is slightly different from that of the sea surrounding the island: it means here simply adversity, and does not particularly bar the approach of any one. Alberti (*Il Teog.*, ii, *Opere*, III, 204), in discussing Fortune's inconstancy, refers to a moving island described by Pliny.

surrounded by water. In the *Orlando Innamorato* Orlando says:

E vo' ch' intendi, se le cose strane
 Son date ad altri ancor da la Fortuna.
 Mio padre è Re de l'Isole lontane,
 Dove il tesor del mondo si raduna.¹

This realm is not Fortune's, however; it belongs to the "Fata del Tesoro," Morgana.² In it are all the riches in the world to make one happy. In Boiardo's description of the Fata and her dwelling-place, this is but one of many points of resemblance to Fortune and her house.

The idea of an island, then, is a natural development, springing probably from the mythical idea of the happy but unattainable isle of the Otherworld, and appearing in some form in nearly all the accounts of Fortune's home. As a symbolic attribute, it is merely one more of the many spontaneous growths that mark the vitality of the worship of the goddess.

III

THE MOUNTAIN

The conception of a mountain as a figure of inaccessibility and adversity is common enough. One speaks of "scaling" one's difficulties or "surmounting" an obstacle; and it is the mountain of Purgatory, we remember, which one has to climb on the way to Paradise. The mountain obviously can also symbolize degrees of exaltation and humiliation in worldly dignity. In *Li Romanz de la Poire*, Fortune attributes to herself certain powers:

¹ I, xxi, 49.

² See I, xxii, 36; xxv, 5.

Reine sui del mont,¹ ci le poez veoir.
L'un met del val el mont et puis le faz cheoir.²

Watriquet de Couvin places a whole city (of which Fortune is porter) on a mountain-top:

Moult i sont riche li citains,
Se touz jors leur durast si tains,
Mais il leur faut, combien qu' il tarde,
Quant le mains s'en donnent de garde;
Quar cil qui au plus haut demeure
Trebusche et chiet en petit d'eure
En mains c'on ne tourne sa main
Reversoient, et soit et main,
Tout bas ou fons de la valée.

King, duke, prince, and lord are cast down,

Car cilz qui plus haut se seoit,
Plus griément cheü se veoit.

In the horrible valley below Death receives the victims.³

The figure is doubled in Nicole de Margival's *Panthère d'Amours*. The lover travels to the house of Fortune:

Tant alames par nos jornees,
Par montaignes et par valees,
Qu'en assez petite saison
Venismes droit a la maison
De Fortune l'aventureuse.
Moult est la maison perilleuse,
Car elle siet toute sus glace,
Qui dure quel temps que il face.⁴

Here the road to the house lies partly across mountainous country, and the foundation of the house itself is a rock

¹ I. e., "world."

of ice, which includes the idea of brittleness or lack of durability, and perhaps the idea of slipperiness in climbing.¹

Thomas, Marquis of Saluzzo, in his *Chevalier Errant* (a document of the fourteenth or early fifteenth century), develops the figure of the mountain still further. The dwelling of Fortune is on the highest rock that the eye has ever seen. It dominates the whole country. At the top are two fearful precipices, near which the goddess is seated on a throne upheld by three lions. She rises in wrath and causes kings and emperors to be thrown from the height. On the side of the rock is a more terrible scene, for there traitors of all kinds are drawn and quartered.²

Similarly, in Fregoso's *Dialogo di Fortuna* we read of the approach, over a hard and thorny road,³ to a beautiful palace on a mountain-top, where Fortune dispenses

¹ On Chaucer's rock of ice, see Sypher's *Studies in Chaucer's House of Fame*, pp. 117 f. Sir William Jones borrows Chaucer's rock of ice for his "Palace of Fortune" (*Works*, 1807, X, 214). Cf. also Fame's house in Dekker's *Troia-Nova Triumphans* (*Mod. Lang. Notes*, XXXIII, 178 f.). See the mention of a house of glass in *La Folie Tristan* (ed. J. Bédier, Paris, 1907), ll. 295-310 of the Oxford text. The house seems to be situated in the air. For the whole matter the references in *Mod. Lang. Assoc., Publ.*, XXXIII, p. 610, n. 30, should be consulted.

² See the summary of § vi, in Gorra's *Studi*, pp. 45 ff. Cf. G. de Machaut, *Poésies*, ed. Chichmaref, II, 415, ll. 15-18:

Et Fortune m'a dou vent

³ Cf. the difficult approach in Frezzi's *Quadriregio*, I, 147 (lib. ii, cap. xiii, 1 ff.), and in Nicole de Margival's *Panthère*, ll. 1958 ff. The barrier to Fortune's abode is like that to the approach of the Otherworld or the Earthly Paradise, and is probably related to it. For material with regard to the latter, see my article in *Mod. Lang. Notes*, XXXIV, 321 ff., especially p. 322 and note 3. Cf. the lofty mountain forest in Spanish literature, *ibid.*, p. 324, n. 9.

gifts. One must have a guide to go up the mountain, because it is so slippery:

Et quando piu felice, e piu giocondo,
 Di questi alcun nel colmo esser si crede
 Spesso se troua in un momento al fondo.

The guides waiting for travellers are Iuista, Audacia, Fraude, Lealta, Valore, Prudentia, Fortezza, and so on. Whoever ascends to the top lives there secure, without fear of Fortune.¹

The idea of the mountain is referred to by Jean de Condé:

Cil haus mons le te fait savoir
 Que rés lieve haitiez au main
 Qu'en mains c'om ne tourne sa main,
 Trebuche et muert en petit d'eure.²

Ariosto interprets the figure of the mountain in the following manner:

Questo monte è la ruota di Fortuna,
 Nella cui cima il volgo ignaro, pensa
 Ch' ogni quiete sia, nè ve n'è alcuna.³

Thus he, too, lays chief emphasis on the idea of exaltation and humiliation.

The mountain, then, according to Alanus, meant the difficulty of reaching Fortune's gifts and the perishable foundation on which they rest. Nicole de Margival stressed the second of these ideas. In Thomas of Saluzzo, Fregoso, Jean de Condé, and Ariosto we have a new interpretation: the mountain appears to mean degrees of

honor and exaltation bestowed by Fortune. But, whatever the meaning ascribed to the figure, it seems to persist in pictures of Fortune's house,¹ and perhaps the most enduring idea connected with it is that of the inaccessibility of the top and the slipperiness of the sides.²

The beautiful garden on the mountain-top in Claudian's poem does not change; but Fortune's garden, ac-

In the *Contention between Liberality and Prodigality* (1602, Malone Soc. reprint, 1913, act iv, scene iv), Prodigality, assisted by Dicke Dicer and Tom Tosse, scales the wall of Fortune's dwelling.

² For the slipperiness of one's stand in Fortune's house, cf. *Carmina Burana*, p. 45, lxxv, st. 1 ("O varium fortune lubricum"); G. de Machaut,

ording to Alanus, suffers continual variation. The hint for this symbolism, like that of the rock and the sea, was also, perhaps, found in Boethius:

Licet caelo proferre lucidos dies eosdemque tenebrosis noctibus condere, licet anno terrae uultum nunc floribus frugibusque redimire nunc nimbis frigoribusque confundere.¹

Somewhat different from the tradition of the changing garden is the scene of Fortune's home in the dream of Aeneas Sylvius:

Iam noctis decurso spatio, syderibus dubiis postquam pigri Boetae frigida farrata circumegerant, uisionem hanc habui. In locos laetos et amena uireta deueni, gramineus campus in medio fortunati nemoris erat, riuo cinctus et muro, duae illic portae. . . . See Shakespeare's *Troilus and Cressida*, III, iii, 84-88:

Which when they fall, as being slippery standers,
The love that lean'd on them as slippery too,
Do one pluck down another and together
Die in the fall. But 'tis not so with me:
Fortune and I are friends.

The year may deck the earth's countenance with flowers and fruits, and again wrap it with chilling clouds" (Cooper's trans.). Cf. Henricus Septimellensis, *Trattato*, 1730, p. 10:

Nam tam uoluptuosam suis sequacibus paradisum Mahometus repromisit, quam hic uidisses. Dispensatores huc et illuc discurrebant, Bachus Ceres et Venus.¹

There is little left to add to this picture. We must note that the scene is not subject to change: the abundance does not decrease, the stream flows with untainted honey, the splendor is not diminished.

Fregoso's *Dialogo di Fortuna* gives us the picture of a great tree on the top of his mountain, on which ripen wondrous apples which Fortuna gives away to those who ascend.² In Boiardo's *Orlando Innamorato*, Roland enters a wonderful garden, where he sees a fountain made of precious stones, beside which lies the beautiful Fata Morgana.³

De Guilleville's pilgrim, it will be remembered, sees a tree standing in the middle of the ocean. As he approaches he discovers that the tree is full of nests, some high, some low, some large, some small:

See also the tree bearing golden apples "as large as the human head", in *Orlando Innamorato*, II, v, stanzas 7-8; and, at I, xxv, st. 11, cf. the antlers of the white stag, their branches laden with treasures. A fruit-tree of some kind is always found in the Otherworld garden, from which these accounts, of course, derive in various ways. Cf. *Mod. Lang. Assoc. Publ.*, XXXIII, 624 ff., with references.

³ *Orlando*, II, viii, 40 ff.

Et en diuerses branches mis

 A son pouoir et desnicher.

Below are several persons thrusting their heads out to look up at the top and often stretching out their hands to get hold of the higher branches; the goddess Fortune has a forked stick to pull them down. The tree is the world, with men of different rank in it; Fortune with her forked stick pulls some of them down, but she uses the crook to help others up.¹

Here the significance of the tree is changed. It has become the symbol of varying degrees of dignity, and its fruit does not represent the gifts of Fortune. Perhaps Deschamps had a tree like this in mind, when he wrote:

Car par orgueil vient tribulacion.
 Fortune a tost getté feur,
 De l'arbre hault les feuilles et la fleur;
 Mais pou grieve l'arbre d'umilité.²

Another picture in a manuscript shows us a large tree, with Fortune standing on the top and armed men in the branches. This is obviously the tree of warfare and success in war.³ It is hard to tell whether there is any idea of exaltation or humiliation intended in the relative height of the branches, but apparently there is no such meaning.

The MS. is of the year 1456 or later (see introd., p. xix). See also *L'Arbre des Batailles*, by Honoré Bonet, British Museum MS., Royal 20 C viii, f. 2^{vo}.

The garden, the flowers, and the tree, then, are all elements in the descriptions of Fortune's abode. Of Fortune herself we read in one place:

Her right syde full of somer flours,
The tother oppressed with winters stormy showres.¹

Flowers, therefore, and the tree with its fruit mean prosperous Fortune. Sometimes, however, as in De Guilleville and Deschamps, the tree represents the idea of varying degrees of dignity, and once at least it relates to success in war.

V

THE PALACE

According to Alanus's view, the palace in which Fortune lives is partly rich and sumptuous and partly squalid and perilous; but there are other ideas about her dwelling which do not carry on this tradition. Watrquet de Couvin's city on the mountain, for example, is

une cité cretelée
De marbre, à bretesche et à tour,
Faitte de riche noble atour,
Car n'est hom qui onques veist
Plus bele ne tant haut seïst. . . .
Car plus y ot de melodie

Ce sembloit paradis terrestre. . . .

Et est portière de la porte,

Car sanz li n'i puet estre entrée
Personne ne passer l'entrée.¹

Of this description two points are worth noting: (1) the city is beautiful, being constructed of marble; (2) there is a gate through which can pass only such persons as its keeper (in this case Fortune herself) permits.

Nicole de Margival, in his account of the castle of Fortune, keeps true to the idea of Alanus:

Mais moult belle est d'une partie,
Et noble et de tous biens garnie;
De l'autre partie est si gaste
Que nul-n'i a ne pain ne paste,
Et est rueneuse et deserte,
Si despeciee, si desperte,
Que s'il espartist, pleut ou vente,
Nulz ne mest la qui ne s'en sente;
Car la pluie, vens et espars
Se fierent ens de toutes pars.²

The gates of Fortune's house are described by Aeneas Sylvius:

Duae illic portae, et altera cornea, altera candenti nitens elephante. Muri altissimi ex adamante constructi. . . . Nulli accessus ad portas nisi per pontes, qui tamen cathenis eleuati paucis aduenientibus dimittebantur. . . . Veni ad coream portam, in cuius summo haec uerba literis antiquis inscripta, conspexi: paucos admitto, seruo pauciores.³

¹ *Dits de l'Escharbote*, ll. 74 ff. (*Dits*, pp. 399 f.). In the *Roman de Fauvel*, Fortune's home is in "Macrocosme,"

Une cité de grant fantosme,
Qui fu jadis faite pour l'omme

² *Panthère*, ll. 1966-1975.

³ *Pontif. Epist.*, I, cviii (*Opera Omnia*, p. 611).

Here we must note the two gates, the bridges crossing the river which has been already referred to,¹ and the inscription. To this account of Fortune's estate the description of the home of the Fata Morgana is again strikingly similar. The Fata's realm is surrounded by a river over which is a bridge with two armed figures standing guard beside it. When Orlando attempts to go across, the bridge is demolished, and, though a new one rises in place of the one that disappears, the same thing always happens again; but he finally leaps the river.² He is told of a horn, which, if blown, will destroy the whole world.³ He comes to a cavern, where, in the cornice of black rock, are cut the words:

Tu che sei giunto, o Dama, o Cavaliero,
Sappi, che quivi facile è l'entrata,
Ma il risalir da poi non è leggero,
A cui non prende quella buona Fata, etc.⁴

The palace of Fortune in Fregoso's *Dialogo* is beautiful with the kind of beauty that deceives the eye. It is surrounded by a great wall, which apparently guards the structure of precious stones. Four large portals, with a triumphal arch and a tower on each, face the four points of the compass, to show that people may enter from all climes and at all seasons. At the top of the palace is a colossus of gold.⁵

³ *Orlando Innamorato*, II, vii, 42. Perhaps this comes from the same story which is told in the original ballad of "Childe Roland to the dark tower came." The "slughorn" is here to be set to the lips, and the dark tower practically belongs to Fortune.

The chief elements in the palace of Fortune, then, are (1) the bridges over the encircling river, (2) the precious materials out of which the city is built, (3) the portals. The descriptions vary considerably, but the important and persistent idea is the richness of the castle and the difficulty in entering it.

VI

THE COURT

Within the palace Fortune is naturally queen, and, as we have observed,¹ this conception of her royalty is frequent enough. In the *Roman de la Rose* she is dressed "cum une roïne";² in Watrquet de Couvin she controls the inhabitants of the city — kings, dukes, princes, lords, and the rest.³

As for the actual palaces of Fortune, in that of Nicole de Margival's *Panthère* the goddess stands at the entrance to receive travellers, assigning them to one of the two parts of the house, which are designated Prosperity and Adversity.⁴ Here she clearly exercises the power of a monarch; and in the *Chevalier Errant* of Thomas of Saluzzo she has a similar dignity, for in her palace are found all the great personages of all time — Penthesilea, Pope Gregory, Agamemnon, Caesar and Hector (two of

precious stones and the towers. See, too, the palace in Machiavelli's *Capitolo di Fortuna* (*Opere*, VII, 367):

the Nine Worthies), Nebuchadnezzar, Pharoah, Nero, Attila, and so on.¹ Christine de Pisan puts guards at the various doors of her palace of Fortune: Dame Richece at the first, surrounded by princes, dukes, counts, cardinals, and bishops; Esperance at the second; and Poverty at the third, with Atropos. Famous men inhabit the castle — Richard the Second, Pierre de Lusignan, and so on,² all of them presumably Fortune's subjects or attendants, who dwell with her.

Aeneas Sylvius gives the most luxurious account of the court scene:

Tentoria illic purpurea erant, margaritis ornata, quae centum iugera cooperiebant. In medio solium erat peraltum, lucens claris Smaragdis, miri praeterea lapides, ebur, solium uestiebant. . . . SUMMARY

The dwelling-place of Fortune is, then, first described in a long account by Alanus de Insulis. From this account two traditions of the site develop: (1) that of the island, (2) that of the mountain. The mountain receives special attention in Nicole de Margival, Thomas of Saluzzo, and in Fregoso, with whom it becomes a symbol not only of inaccessibility and danger, but of degrees of dignity accorded by Fortuna. Essential points in the description of the site are the garden, the flowers, and the trees; the tree, like the mountain, also becomes a special symbol of degree of exaltation. The castle sometimes leaves the direct line of tradition from Alanus and appears merely as a sumptuous palace which is not divided into good and wretched sections. Later, perhaps through influence from the Court of Love, it becomes the scene of a splendid court, with numerous courtiers taken from history.²

To sum up the meanings implied in all of these symbols, the permanent ideas seem to be: (1) the inaccessi-

² See the borrowed details of all these points in Chaucer's *Hous of Fame* (cf. Sypherd's *Studies*, pp. 112 ff.). Sir William Jones, in the eighteenth century, restores the house to Fortune by borrowing features from Chaucer's poem: see his *Palace of Fortune* (*Works*, 1807, X, 211-229), and E. Koepfel's article on it in *Englische Studien*, XXVIII, 43-53.

bility of the house of Fortune, (2) its richness, and (3) the varying rewards received on getting there. In other words, the benefits of Fortune are hard to achieve, they are precious from a worldly point of view, they are bestowed in different measure. A celestial atmosphere clings about the place.¹ The island, and possibly the mountain, have an ancestry in folk-lore with which the idea of "the happy Otherworld" is connected. Perhaps the conception is not entirely unrelated to our present figure of a "Castle in Spain." At any rate, the whole image is not so much a poetic creation as an automatic growth developing according to its own laws, and the same elements persist in nearly all the descriptions, in whatever way these may be interpreted.

Cf. the paradise on the mountain of purgatory (Dante, *Purgatorio*, xxviii), with its double river, its flowers, and its gentle breeze; cf., too, the islands in the *Voyage of Bran* (see p. 130 above). The *Roman de la Rose*, l. 5941, has "Qu'ele ait en paradis maison."

CHAPTER V

FORTUNE'S WHEEL

NO symbolic attribute is so familiar in accounts and pictures of Fortune as the wheel. It so often appears in the portrayals of her, either as turned by her fickle hand or as standing near her with the possibility of suddenly beginning to revolve, that even when we find it alone, without the goddess, we are strongly tempted to call it Fortune's wheel anyway. But the wheel is a symbol with an almost limitless significance. At one time or another the circular form has been used to typify speed,¹ travel, guidance,² the endless round of monotonous existence, changeableness, the sun,³ the earth, God, and eternity.⁴ Definition is therefore necessary to determine what the peculiar meaning of Fortune's wheel is, and to discover what particular wheel rightly belongs to her.

In order to suit the character of Fortune most appropriately, the wheel must in some way represent the idea of variation and change. It must do so even in the case of

¹ The wheel with a wing upon it. Cf. Cousin's *Livre de Fortune*, pl. 115. See p. 45, notes 3, 4, above.

² The steering-wheel. Cf. the windlass figure in Horace, *Carmina*, III, x, 10.

³ See Gaidoz, *Le Dieu Gaulois*, § xvi, pp. 56 ff.

⁴ In fact, some scholars believe that in Roman times the wheel was not associated particularly with Fortuna. See Roscher, who notes (cols. 1506-1507) that in art the wheel is not commonly related to Fortune, but cites examples from literature to show that the use must have been known. See also Matzke on the source of "To take Time by the Forelock," *Mod. Lang. Assoc., Publ.*, VIII, 328.

the Christian figure, for she too is outwardly a variable creature. This idea the wheel can present in at least two ways: (1) it would seem untrustworthy enough merely in its function of turning, and (2) it would form an insecure footing for the goddess.

How did such symbolism become associated with Fortune? The stages of development might have been as follows: In its earliest use the wheel seems to have meant instability rather than variation.¹ Just as the castle of Fortune stands on a shaky foundation, so Fortune herself may be thought of as standing on some changing, roving pedestal; and what better pedestal for her than a sphere or a ball?² The figure of Fortune standing on a sphere was known in the art of ancient Rome,³ and is preserved in drawings of the middle ages.⁴ Art in the flat, in bas-reliefs, reproduced the ball by means of a circular line, and so the wheel came into use as a symbol of instability. The figure of Fortune standing on a wheel persisted in mediaeval art, which in these drawings copied the old Roman figures.⁵

¹ For the development in Rome, see Weinhold's *Glücksrad und Lebensrad*, for some suggestion of this order of development, see Roscher, col. 1506.

² I leave out of account the question whether this ball was originally the sun or the moon. By the time Fortune became fickle, the idea of sun or moon was certainly lost, and so the process of interpretation becomes the same.

³ See Roscher, col. 1504; Gaidoz, *Le Dieu Gaulois*, p. 56. J. A. Hild, in Daremberg-Saglio's *Dictionnaire*, p. 1277, says that the sphere is of purely Roman origin and that the cornucopia is the Greek symbol. The development of the wheel as here described is suggested by Kirby Smith, *The Elegies of Albius Tibullus* (N. Y., 1913), pp. 306 ff., n. 70.

⁴ See above, p. 45, n. 4.

⁵ According to Barbier de Montault (*Traité*, I, 163, § 5), in the episcopal chair at St. Bertrand de Comminges Fortune stands on a broken wheel and thus fails in her footing. In Cousin's figure 193 she stands on a globe

But Fortune who totters about on a wheel in art or in literature is not so much the goddess as the type. Not until the wheel itself becomes a symbol of variation, turned possibly by the hand of the goddess, have we a really good allegory for the divine figure. This is the figure, it is significant to note, out of which the Middle Ages made so much, and it is the complexities of this representation that the following study will attempt to make at least a little clearer. The method of study will be to consider, first, the possible origins or beginnings of the idea in Rome, and, secondly, the later developments in mediaeval literature and art.

I

THE CLASSICAL FIGURE

The wheel of Fortune in Roman art apparently does not represent the conception of a wheel directly controlling man's affairs.¹ The idea in art is merely, as I have

with her wheel broken on the ground beside her. See also Scarlattini's descriptions, *Homo Symbolicus* (1695), II, 70; and, much earlier, Alciati's emblem of "In Occasionem" in the 1536 edition of his emblems (ed. Green, *Fontes Quatuor*, 1870, wheel upright), and in the Lyons, 1551, edition (ed. Green, *Flumen Abundans*, 1871, p. 133, wheel flat). Schoonhoven's second emblem shows Fortune, or "Sors," prostrate on her flat wheel. Fortune shared the symbol of the wheel with the Fates and with Nemesis: see Roscher, col. 1506; Alciati's "Nec Verbo nec Facto quenquam Laudendum" (1531 ed. of emblems, Green's *Fontes Quatuor*, 1870, sig. A 7); and cf. Cousin's plates 127, 129. The idea of Fortune standing on a wheel is introduced by Lydgate into his translation of De Guilleville's *Pelerinage de l'Homme* (see Lydgate's *Pilgrimage of the Life of Man*, ll. 19470 ff.) For the wheel in Greek, Professor Yeames of Hobart College has given me references to Herodotus, i, 207, and to Sophocles, fragment 809 (cf. Jebb's note on the *Antigone*, 1156 f.).

¹ Galpin (*Mod. Lang. Assoc., Publ.*, XXIV, 332) makes this observation. See S. L. Wolff, *Greek Romances in Elizabethan Prose Fiction*, p. 387, n. 31.

already suggested, that Fortune is on a moving foundation. In literature, however, we see a closer connection between the wheel and the fortunes of men. A few examples are enough to illustrate this idea.

Ammianus Marcellinus has,

Fortunae uolucris rota, aduersa prosperis semper alternans;¹

and in another place,

Ea uictoria ultra homines Procopius sese efferens, et ignorans quod quibus beatus uersa rota Fortunae ante uesperum potest esse miserrimus.²

Seneca makes one of his choruses sing:

Ut praecipites regum casus
Fortuna rotat!³

Here we see a vital relation between the wheel and human fortune. In the first two examples there does not seem to be any implication that Fortune herself revolves with the wheel, or shows that instability which had been symbolized in the figure of her standing on such a foundation; in the last one (which, by the way, is fully three centuries earlier) Fortune appears to rotate human affairs by her own power. It seems ridiculous to suppose that — at least after the wheel received any conscious attention — there was any conception of its having arbitrary power to turn human life without the superior control of the goddess.⁴

¹ *Res Gestae*, XXXI, i, § 1.

² *Ibid.*, XXVI, viii, § 13.

³ *Agamemnon*, ll. 71-72. See, too, Cicero's oration against Piso, cap. x, "Fortunae rotam pertimescebat." Cf. *Aeneid*, vi, 748-749; Tibullus, I, v, 69-70, and cf. the notes in Kirby F. Smith's edition, 1913, p. 306.

⁴ In the confused figure described below (pp. 152 ff.), where Fortune herself is turned on the wheel, she has really become a type, as the discussion shows.

By the fifth or sixth century, at any rate, the wheel was no longer thought of as independent. Boethius uses the figure of Fortune's controlling it as if the idea were perfectly familiar. He makes Fortune say:

Rotam uolubili orbe uersamus, infima summis summa infimis mutare gaudemus. Ascende si placet, sed ea lege, ne uti cum ludicri mei ratio poscet, descendere iniuriam putes.¹

Here the goddess herself professes to turn the wheel; low becomes high and high becomes low; one may voluntarily ascend to the top, and therefore human figures are conceivably attached to the wheel. There is not the slightest hint that Fortune revolves with it; on the contrary, she is in charge of affairs and does not suffer the reversals.

Unfortunately we have no smooth succession of references to the wheel from the time of Boethius to that of Dante. We must leap a gulf of several centuries and pass on to the twelfth before we can tell what tradition has been established; but there in many works we find Fortune responsible for the turns of the wheel. For instance, we read:

Sic fortuna uices uariat, sic infima summis
Summaque commutat, sua cum rota uoluitur, ymis.²

Again, Fortune herself revolves the wheel in the description by Henricus Septimellensis;³ and the theme of "high and low" is found, together with Fortune's control of the wheel, in *Floire et Blanceflor*,⁴ in *Le Donnei des*

Amants,¹ and in Marie de France's "lai" of *Guigemar*.² These allusions might seem to settle the tradition from the classics, for at first glance the train of development seems to be as follows: classical literature connects the wheel intimately with the turns of human affairs; Boethius puts man himself on the wheel and seems to suggest that Fortune herself turns it, probably by hand; writers in the twelfth century use this conception as if it were quite established and thoroughly familiar.

But there is another tradition which may cause us a little difficulty. Sometimes a passage remains ambiguous as to whether the wheel is actually turned by the goddess,³ but in the first quarter of the twelfth century Honorius of Autun describes a figure which he apparently owes to tradition and in which Fortune herself clearly suffers the revolutions of the great symbol:

Scribunt itaque philosophi quod mulier rota innexa iugiter circumferatur; cuius caput nunc in alta erigatur, nunc in ima demergatur. Rota haec quae uoluitur est gloria huius mundi quae iugiter circumfertur. Mulier rotae innexa est fortuna gloriae intexta. Huius caput aliquando sursum, aliquando fertur deorsum, quia plerique multocius potentia et diuitiis exaltantur, saepe egestate et miseriis exalliantur.⁴

Now, it seems clear that the philosophers to whom Honorius refers did not include Boethius, for the latter's description is certainly not specific enough for any such

elaborate interpretation as this, even granted that Honorius could have understood him in this way. Moreover, there is nothing to show that Honorius conceives Fortune as turning the wheel in the way definitely described by Boethius and as commonly accepted by tradition. Yet the conception of Honorius is not without some followers. Wace writes:

Fortune trop par es muable,
 Tu ne pues estre un jor estable,
 Nus ne se doit en toi fier:
 Tant fais ta roe fort torner,
 Mult as tost ta color muée
 Tost es-chaoite, tost levée. . . .

Tost as un vilain halt levé
 Et un roi em plus bas torné.¹

In the *Roman de la Rose* Fortune "siet où milieu comme avugle";² in Chaucer and Lydgate she "turneth as a bal."³

What are we to do in this quandary? Apparently we must consider that after the time of Boethius two traditions were established, one in which Fortune turns the wheel, and one in which she herself is turned thereon. In the second figure she logically should have no control over the turns.

In just this inconsistency, perhaps, lies the solution. In Honorius Fortune has no power over the wheel; in Wace she apparently has a borrowed control. The tradition is not direct, the ideas are not precisely the same. In Honorius Fortune revolves and her head goes where her feet should be; in Wace she simply rises and falls; in the *Ro-*

man de la Rose she is stationary; in Chaucer and Lydgate she revolves like a ball — the wheel-figure itself is not even presented. In other words, I do not think these passages have enough points of contact to establish a tradition. Wherever Honorius found his ideas, then, I do not think he got them from Boethius, nor do I think he passed them on to his successors. The writers following him chronologically seem to have original touches, introducing only a similar confusion of type and symbol. Lydgate is indebted to Chaucer, and Chaucer's line certainly appears to take nothing from any of the other passages.

The point, then, is this: that the main tradition from classical literature is the figure of Fortune turning her wheel, on which mankind and the estate of man depend, and that this idea has some actual beginnings in early Roman times.

II

THE MEDIAEVAL FIGURE

Whatever meaning was originally attached to the wheel, or whichever of the gods was chiefly associated with it in ancient Rome, by the time of the Middle Ages it primarily belonged to Fortuna, as the preceding section of this chapter implies. We find it in portraits of her again and again.¹ The *Awntyrs of Arthure* refers to her as

"that wondirfull whele-wryghte."¹ Even the wheel itself takes over descriptive epithets and themes which commonly belong to the goddess.² In literature, from the time of Boethius apparently, mankind was thought of as revolving on the wheel itself; and, although such an idea was foreign to Roman art, mediaeval drawings show actual men on the rim of the wheel turning at the will of the goddess.³

The wheel itself we may now consider as a special topic, and we shall study its treatment and the various ways in which it works. It may have two different meanings. First, there may be a vague, indefinite connection between it and the objects bestowed by Fortune, — wealth, accident, and the like, — which it controls. As it turns, so man's fortune changes;⁴ just how the change is brought about we are not informed, — merely, Fortune turns her wheel. Secondly, we learn that men are them-

A man may be on the highest point of Fortune's wheel,² and may yearn to stay there.³ Or he may feel that nobody else has ever suffered quite so much from the goddess and reached so low a stage on her wheel — an idea founded on a widespread conviction, common particularly to romantic temperaments, that one's own torture is unique in being greater than anybody else's. ⁴ Boccaccio, *Filocopo*, ii (*Opere*, VII, 158-159).

Septimellensis felt that he had suffered more than the rest of humanity, and the "Manekine" likewise conceived her trials to be particularly great.¹ Sometimes Fortune turns one so exceedingly far down on the wheel that it will never be possible to rise again.² In fact, in one case we read:

La miserabil fortuna che abbassato per li vostri inganni mi vede assai mi nuoce, e niuno aiuto mi porge, anzi s'ingegna con sollecitudine continua di mandarmi più giù che la più infima parte della sua ruota, se far lo potesse, e quivi col calcio sopra la gola mi tiene, nè possibile m'è lasciare il doloroso luogo.³

Both these conceptions involve the idea that the wheel can stop. Boethius and those who take his doctrine have assured us that it is useless to attempt to stop it — that it revolves ceaselessly;⁴ and yet we do find certain passages where it seems to have paused or where there is an implication that it may pause on occasion.⁵

But apparently the malign object of the goddess is accomplished in other ways than by sinking her victim on the wheel; at least the expression describing her work is different. Thus, she may turn her wheel *the wrong way*, a phrase which seems to explain the passages in which she is said to turn the wheel "against us," "contrairement," and so on.²

Man himself also plays a part in the game. In Boethius, as we have seen, he is invited to ascend with the wheel; that is, he voluntarily submits to endure the turns of Fortune, hoping, it is implied, that he may somehow struggle to the top, or, arrived there, may manage to maintain his position. The *Kingis Quair*, for example, tells us:

For sothe it is, that, on hir tolter quhele,

And failyng foting oft, quhen hir lest, rele

² Of course, from one point of view any way except upward is the wrong way, and therefore the wheel may not be thought of as choosing a new path. SEVERAL WHEELS

PLATE 9

"Et m'as si geté en la boe."

Pierre de la Broche, stanza 12, l. 6.

The wheel, then, in the Middle Ages means relative exaltation or humiliation in worldly dignity. It is turned by Fortune, and man is often actually attached to the rim, where he suffers the consequent changes of position. It may or may not stop, according to your own idea of the matter; it probably goes amiss somehow. But there seems to be a notion that it is your own fault if you suffer, because you have a certain control over the question whether you will get on the wheel at all.

III

THEMES IN THE DESCRIPTION OF THE WHEEL

Several themes in the description of the wheel have already been suggested in the matters studied in the preceding sections of this chapter: sometimes Fortune stands on the wheel; sometimes she is attached to it and revolves with it; the wheel puts man's affairs into good or bad condition; Fortune revolves man's estate on the rim; the wheel may cease to move (or it expressly may not!); man may climb on it and may struggle to the top. But there are further developments of some of these ideas, which may now be briefly described.

Clearly the most impressive trick of the wheel is to whirl a man from the top to the bottom. Man "falleth ofte unsofte,"¹ and he is not likely to forget it. Concerning this act a particular riming formula which obtained some popularity came into vogue:

Religious, and Love Poems, pp. 265 ("Ware the Wheel!"), 266 ("ȝif þou be cointé, þou ssalt liue"); Lydgate, *Troy Book*, i, 784 ("who clymbeth hyȝe may not falle softe"); *Awntyrs of Arthure*, st. xxi, 253 ("Maye no man stere hy of strengthe, whills þe whele standis").

¹ Lydgate, *The Churl and the Bird*, st. 30.

Sire, mains gentius hom seoit ier sor la roe,
qui por le votre mort est ceus en le boe.¹

A man is now on top of the wheel and then below in the mud. Since the wheel is regarded as standing upright, generally with the lower part of the rim near the ground, this figure need not include the idea of one's being cast off by centrifugal force. Even in such a line as the following,

Et m'as si geté en la boe,²

the idea of one's being entirely thrown off from the rim of the wheel is not stated definitely; ³ the meaning seems to be merely that one is in about as disagreeable a position as the device can offer. It may be regarded, however, as a step in the direction of the centrifugal idea.

The figure of the wheel's casting a man into the mud is carried even farther in *Athis and Prophilius*, where we

¹ Alexandre de Bernay, *Li Romans d'Alixandre*, ed. Michelant, p. 522, ll. 2-3. This is the earliest instance of the use of this formula that I can find. Galpin (*Mod. Lang. Assoc.*, *Publ.*, XXIV, 334) gives the history of the *roe-boe* rime. See also Rutebeuf, *Œuvres* (1874), I, 105, ll. 33-37; *Romanz de la Poire*, ll. 37-40; *Roman de la Rose*, ll. 3998-3999, 4910-4911, and (*ibid.*, IV, 33-34) Jean de Meun's *Testament*, ll. 652-655; Sieper, *Les Échecs Amoureux*, p. 85; Galpin, in *Mod. read that the man is plunged very deep — "Tost le re-trebuche an l'abisme." ¹ Baudouin de Condé gives us a vivid picture of a similar scene rather more developed:

In the tower of Love's prison stands Fortune, turning a wheel of four spokes. The spokes on high uphold the lords of the world, the lower part of the wheel supports those who are worth nothing at all. Those on high have success in love:

Li autres rais si aval baisse,
Ke jusk'en la cartre s'abaisse,
Là ù cil sunt qui n'ont d'amours
Fors les travaus et les dolors.

The wheel turns about, putting some on high and others low:

Les autres torne contreval
En la prison, ù li travail
Et les grans paines sunt d'amours.

The prison below is a gloomy place, dark for want of the light which love spreads. Serpents, whose bite is desire, breed there.²

In this account the wheel sends its victims down into the prison; at least, they are turned there on the surface of the wheel, although they seem to have a chance of getting out again.³ Baudouin tells us that one comes to Fortune and voluntarily climbs on the wheel,⁴ whereupon the individual is in danger of the prison.

A description of remarkable similarity, close enough indeed to suggest actual influence, is found in the *Kingis Quair* of James I of Scotland, whose narrative runs as follows:

The author went to Fortune and found her waiting beside her big wheel, to which a multitude of folk were clinging.

¹ Line 1979. Cf. Jubinal, *Contes, Dits, etc.*, I, 196, "Demain sera getez en la terre parfonde."

⁴ See ll. 1027 ff.

And vnderneath the quhelē sawe I there
 An vgly pit, as depe as ony helle,
 That to behald thereon I quoke for fere;
 Bot o thing herd I, that quho there-in fell
 Come no more vp agane, tidingis to telle.

The wheel was slippery: many failed in their footing and were rolled to the ground. Some were too sore to climb again, others Fortune picked up safe and sound. A new swarm filled the empty places. Fortune called the author by name, bidding him climb on the wheel; and he must be quick about it, for time was passing.¹

Here the author seeks Fortune concerning affairs of love, as the chief figure does in Baudouin's poem; the wheel is practically a wheel of love, and the author succeeds in his suit, "thankit be Fortunys exiltree." Some do not rise again after their fall, but others Fortune is prevailed upon to assist; all voluntarily climb on the wheel; and, most important of all, beneath the wheel is a pit.

Other suggestions for the picture of Fortune as given in the *Quair* and the *Prisons d'Amours* are to be found in some versions of the *Mort d'Arthur*, and perhaps in these lines of the twelfth-century *Cursor Mundi* :

Dame fortune turnes þan hir quele
 And castes vs dun vntil a wele.²

¹ See the *Quair*, stanzas 159 ff. For discussion of the sources of this idea, see Lawson's introduction, pp. lx ff., and for its influence see p. lxxiv; but his suggestions do not account for the most important element, the pit.

² Lines 23719-23720. Cf. the descriptions in the stanzaic *Morte Arthur*, ll. 3168 ff., and Malory's *Morte Darthur*, book xxi, ch. iii. The French *Mort Artu* (ed. J. D. Bruce, Halle, 1910) p. 220, has a different account; also the alliterative *Morte Arthure*, ll. 3250 ff. See Bruce's note, *Mort Artu*, p. 291. The wheel in the Alexandrian fragment of *Cassamus*, or *Les Voeux du Paon* (ed. Roskopf, p. 69, l. 405), is connected with lovers, but there is no pit; nor is there any in Skeat's edition of Alexander's *Wars* (Early English Text Soc., Extra Series, No. 47, p. 104), although here there are flood-gates and drenching. The idea of the pit appears again, however, in Painter's trans-

Here, to be sure, there is a chance of recovery for a time, till Death claims one. In art, however, there is a familiar representation of a wheel with a grave or a coffin beneath it,¹ and perhaps this idea alone, often found in pictures of Fortune, was enough to suggest the figure of the pit.

The idea of the centrifugal action might easily have been suggested by the roulette or by other actual uses of the wheel in real life. But the truth is that this conception does not play a large part in literature,² and herein the *Quair* shows about the closest approach to a use of the figure. How successful and moving the scene is in King James's poem may be gathered from the inspiration the lines offered to Dante Gabriel Rossetti, who took over the theme and plan for his *King's Tragedy*. Rossetti's most powerful passages are those recounting Fortune's work. The poem leads to a sublime climax of emotion, and strikes its final note in the lines,

lation of Boastuau's French paraphrase of *Romeo e Giulietta* (New Shakespeare Soc., Series 3, I, 111):

"And thus a month or twayne, they continued their joyful mindes, to their incredible satisfaction, until Lady fortune envious of their prosperity, turned hir Whele to tumble them into sutch a bottomlesse pit, as they payed hir vsury for their pleasures past, by a certayne most cruell and pitifull death."

On the pit, see Post's *Sources of Juan de Mena*, in *Romantic Review*, III, 243-245.

² The use of the wheel in *Les Échecs Amoureux* does not involve the centrifugal figure. For discussion of this point, see *Mod. Lang. Notes*, XXIX, 197. For centrifugal force, see Chaucer's *Troilus and Criseyde*, iv, 6, "whan a wight is from hir wheel y-throwe"; Lydgate's *Daunce of Machabree*, prol., st. 2, "Fortune hath them from her whele ythrow; and his *Siege of Thebes*, l. 890, "From her wheel she plunged hym a-down."

Through the dusk where the white face lay
In the Pit of Fortune's Wheel.¹

So much may be said for the motion of Fortune's wheel; now for the figures attached to it. The most common conception, perhaps because it seems the simplest and most natural, and perhaps because it may therefore be the oldest, is that of the wheel with four human figures on the rim. This theme is so definitely marked that it deserves special study.

Since it seems likely that the idea originated in art from its peculiarly visual quality, I shall give a typical example taken from a mediaeval drawing. On the top of the wheel is a crowned youth sitting on a throne and holding a sceptre; at the right is a figure falling, his crown dropping from his head; at the bottom is a figure prostrate; on the left is a man climbing, extending his hands toward the youth at the top. The figures are inscribed respectively, *Regno*, *Regnavi*, *Sum sine Regno*, and *Regnabo*. This picture is exceedingly familiar in mediaeval art.² In one of Boccaccio's descriptions of

BOCCACCIO AND FORTUNE

Fortune we read: "I saw men climbing the wheel by their wits, and arrived at the top they said, 'I reign.' Others, failing, seemed to say, 'I am without reign.'"¹ In another place the "formula of four," as we may call this theme, gives the topics and titles to a series of poems, beginning with a speech by Fortune and then proceeding with a monologue by each of the four figures:

FORTUNA. — I am that Fortuna who has made and unmade kings and emperors. It is of no avail to worship me. Let him beware who sits at the top of the wheel. Let each hold fast to his treasure.

REGNO. — I reign at the top of the wheel, as Fortune has destined me. But if the wheel turns I may be deprived of power. Be moderate, ye who are in power, lest you fall to earth. Behold the honor I am paid because I sit at the top of the wheel.

REGLAVI. — I reigned for a while, then Fortune put me down and deprived me of everything good. Her friendship avails not. No friend remains when a man falls. Do not be confident when you are rising; Fortune makes you fall with deadly blows. Harken to my case, how I gained and lost this honor.

REGNABO. — I shall reign if Fortune pleases and the wheel turns to the fourth place. I shall be above and rule all the world. How great is my pleasure then! Virtue moves me to speak such words, because I plan to do justice and punish those who have maliciously robbed the men of good estate. What joy I shall have to be able to punish them!

SUM SINE REGNO. — I am, as you see, without reign, down low in wretchedness. Fortune has disclaimed me. If I should mount

on this wheel, every man would be friendly to me. Let each take warning who considers me:

Appresso de Iesu ella è unita
 Questa cattiva che nel foco arda,
 E sta tanto sentita,
 Dando et tollendo ove più li pare
 Tal gratia li ha voluto dio donare.¹

The formula is adapted to a dramatic use in the *Mystère de Bien-Advisé et Mal-Advisé*, where we see the figures acting parts:

Bien-Advisé and Mal-Advisé, after meeting and consulting with Franche-Volonté, and after visiting the house of Raison and calling on Foy, become separated. Mal-Advisé travels with Folie, Hoquélerie, and so on. Presently, however, the two men meet at the house of Fortune. Mal-Advisé wishes to try the wheel, but Fortune makes him retire in favor of four men in whom she is interested — Regnabo, Regno, Regnavi, Sum sine Regno. These figures climb on the wheel, and after successive turns Fortune takes Regnavi and Sine-Regno and "les precipite de sa Roue"; whereupon "ces deux personages se voyans sans espoir d'y remonter, vomissent mille injures contre cette inconstante." Nothing abashed, Fortune takes Regnabo and Regno under her protection, while Bien-Advisé advises the two left despairing to go to Confession. Meanwhile Fortune, after some diversion in revolving Regno and Regnabo on the wheel, makes them fall also. The Vices take them to Malle-Fin, from whom they are conducted to the torments of demons. The two good disciples who have confessed go to Bonne-Fin and are turned over to Penitence, who, after beating them with rods, leads them to Paradise and the awaiting angels.²

Such is the dramatic and literary use of the formula of four. Besides these treatments, we have occasional brief allusions to the theme elsewhere in literature.³

THE FOUR FIGURES

There is a peculiar variation of the wheel with human beings attached to it, in which we find a human figure not lying on the periphery but stretched across the face. Fortune takes over Ixion's wheel and Ixion along with it.¹ Honorius of Autun, after describing the wheel on which, according to the report of the philosophers, Fortune is tied, continues:

Dicunt etiam quod quidam apud inferos damnatus per radios rotae sit diuaticatus; quae rota sine intermissione ab alto montis in ima uallis feratur et iterum alta repetens denuo relabatur.²

This is in close relation to his discussion of Fortune's wheel. Walter Map goes still farther:

Ixion ibi uoluitur in rota. Nec hic desunt Ixiones, quos uolubitas torquet fortunae. Ascendunt ad gloriam, ruunt in miseriam.

· · · · ·
Habemus et nos Ixiones, quos sorte sua uolubilis fortune torquet.³

In Frezzi's *Quadriregio* Ixion suffers on one of the seven wheels of Fortune there conceived:

Colui, che su e giù ha tante doglie,
E'Ission', ed ha tal penitenza,
Che volle a Giove già toghier la moglie.⁴

It is not strange, then, that in Henryson's *Orpheus and Eurydice* Ixion's wheel takes over many of the characteristics of the symbol of Fortune.⁵

OTHER MEDIAEVAL CONCEPTIONS OF
FORTUNE'S WHEEL

We have thus far observed some of the more common themes, all of which depend on the idea that Fortune's wheel revolves mankind either on its circumference or on its face; but there are conceptions which give it other activities or possibilities. The wheel, to be sure, may still revolve the fortunes of mankind or may turn man himself from top to bottom, but it accomplishes such changes in a slightly different way and generally with added symbolism.

And wyth a quhirl, unwarly or thai witte,
Ar throwin doun to pure and law estate,

with Walter Map's "Ascendunt ad gloriam, ruunt in miseriam," quoted above. See, too, Brant's *Narrenschiff*, ed. Zarncke, p. 57, § 56, ll. 48-52 (cf. Simrock's ed., p. 129 ff.):

Ixion blibt syn rad nit stan
Dann es loufft vmb, von wynden kleyn
Sellig, wer hofft jnn gott alleyn,
Er fellt, vnd blibt nit jn der hoh
Der steyn.

The idea of men tied to the wheel or broken on it is suggested in Boccaccio's *Amorosa Visione*, cap. xxv (*Opere*, XIV, 102), and in Sannazaro's *Opere*, p. 387. Cf. Cousin's plate (No. 17), where an old man with wings is lying on the rim of the wheel. For figures attached to a wheel (not Fortune's) in the Inferno, see late references in Marie de France's *Espurgatoire Saint Patriz*, ll. 1121 ff.; De Guilleville's *Pelerinage de l'Ame*, Roxburghe Club, ll. 4873 ff. (a devil turns this "wheel of torment," the figure at the top is whirled down and his head is dashed at the bottom), 5309 ff. ("two strong Satans" turn this wheel); A. van Staveren's *Auctores Mythographi*, 1742, frontispiece (cf. above, p. 131, n. 2); Petit de Julleville's *Histoire de la Littérature Française*, *Moyen Age*, II, 416-417, plate representing the stage-setting for the Passion play at Valenciennes, 1547 (MS. fr. 12536, Bibl. Nat.).

For example, the wheel is sometimes figured as having a course on which it turns. Perhaps this means only that it goes "round and round"; but when we read of its changing this course we must understand either that it goes backwards or that it travels on a special road and selects a new path.¹ We do find an apparent reference to the road:

Perchè mentre girato sei dal dorso
 Di ruota per allor felice e buona,
 La qual cangia le volte a mezzo il corso.
 E non potendo tu cangiar persona,
 Nè lasciar l'ordin, di che il ciel ti dota,
 Nel mezzo del cammin la t'abbandona.
 Però, se questo si comprende e nota,
 Sarebbe un sempre felice e beato,
 Che potesse saltar di ruota in ruota.²

Here the wheel becomes for all practical purposes a wheel of travel, a vehicle.³ Moreover, — and this leads to our next topic, — several wheels of Fortune are sometimes mentioned.

¹ See Lydgate, *Beware of Doubteness*, in Skeat's *Chaucerian and other Pieces*, p. 292, ll. 43-44 ("Whos cours standeth ever in doute For to transmew"); Chaucer, *Troilus and Criseyde*, i, 138 ff. Cf. p. 158 above.

² Machiavelli, *Capitolo di Fortuna* (*Opere*, VII, 369; and see 368, "con tante ruote").

³ For the wheel as a vehicle, see *Roman de la Rose*, ll. 6168-6171; Galpin, *Roman de la Rose*, pp. 340 f. See also Sannazaro, *Opere*, p. 379,

Rota par che vi affide;
 E vi spiani dinanzi e fossi, e monti;

Gower, *In Praise of Peace* (*Works*, III, 481 ff.), ll. 115-116,

The werre hath set his cart on thilke whieles
 Wher that fortune mai noght be believed.

See Gaidoz, *Le Dieu Gaulois*, p. 58, the wheel of Fortuna Redux. Cf. *Perceval le Gallois*, I, 80 (prose, twelfth century): "Li chevaliers qu'ele moine après lui sénéfie la roe de fortune; car, tout autresint comme li chars vet sor les roueles, demoinne ele le siècle aus II damoiseles qui la suivent."

In the *Roman de Fauvel* good and bad Fortune are symbolized, with the usual mediaeval concreteness and complexity, by two wheels, one fast and the other slow, within each of which is another small wheel that has a contrary movement. All four "font l'estat du monde tourner." ¹ Frezzi introduces a further complication by conceiving seven great wheels, "come spere in questo Mondo." The fourth is taller than the rest and reaches up to Jove; those on each side are decreasingly smaller. On the wheels are various characters, those aloft rejoicing in happiness, those below suffering disaster.²

So much for the mechanism of the wheel, with the usual symbolism of its control over the casual affairs of life or over the figures of men themselves. But the wheel was held to have power, not only over man's worldly affairs, but also over his spiritual condition. Thus, a figure might

¹ See Langfors's ed., ll. 1931-1940; and the summary in Gorra's *Studi*, pp. 55-56. For two wheels see pl. 9 in the present volume. Cf. the three wheels in Juan de Mena: Post, "Sources of Juan de Mena," *Romanic Review*, III, 225. Perhaps the suggestion for several wheels comes from a natural comparison of the wheel of Fortune to the earth (see, e. g., Wright, *Satirical Poets*, II, 39, "ut rota mundus; Quippe volubilis, et uariabilis, ac ruibundus") and then to the spheres. See Pulci's *Morgante Maggiore*, II, 49, and xxii, 38, where it is hard to tell what "le volubil rote" means.

² *Quadrivregio*, I, 148 (lib. II, cap. xiii, 13 ff.). Ixion (cf. p. 167 above) is on the fastest wheel; Rienzo Tribuno on the second; Bernabò of Milan is on the third, and his nephew on another. See also, in Guillaume de Machaut's *Leivre du Voir-Dir*, pp. 333-334 and note, the four little circles within a great one, round which is written, "Affluo, discedo, talis ludus cui me do." The poem gives the inscriptions on all the other circles, and says of the fifth or surrounding one, which "met tout à destruccion,"

Quant tu le saras hé-m' & fui.

be filled with pride at the top of the wheel, but later at the bottom feel correspondingly humble, the two estates of pride and humiliation being caused by the frame on which he is turning.¹ Buti gives us an interesting wheel, which is worth reproducing here to show one elaboration of this idea:²

Apparently the qualities on the right side of this wheel would be at the highest part according to most conceptions, since pride comes at the supreme moment of achievement;³ but in Buti's figure the highest point seems to be actually between Pazienza and Pace,⁴ and, falling, one drops first into that dangerous kind of peace

¹ See *Le Roman du Renart*, ed. Méon, I, p. x (Orgueil and Guille near the top of the wheel, apparently representing the estate of Renard while he sits in power).

³ Cf. Cousin, *Livre de Fortune*, pl. 119, in which the inscriptions, marking six appropriate figures, run round the wheel thus, beginning at the top: "Ex Divitis Superbia, Ex Superbia Bellum, Ex Bello Paupertas, Ex Paupertate Humilitas, Ex Humilitate Pax, Ex Pace Divitiae."

⁴ Cf. *ibid.*, pl. 93, "Fortunae Patiētia Victrix."

or composure which may go farther — into an excess of luxury. This is a distinctly original touch. The wheel, as usual, revolves clock-wise, and here the idea of unlimited revolutions is perfectly conceivable. One might regard it as a wheel analyzing the range of experience in a certain kind of human life. The moral question is not introduced.

In other wheels, however, we do find a reference to the moral question. People rise to their proud positions by fraud, but they always fall again.¹ Virtue is necessary to keep one's position:

Tout adès fermement s'i tient
 Ki aime Diu et carité,
 Et a de son proisme pité;
 Car qui sagement s'i avise,
 Cele roe que on devise,
 N'est sans plus que cis morteus mondes.²

Or sometimes the wheel, like the similar figure in the Orphic mysteries, is a wheel of monotonous, whirling durance, submission to which is caused by too much concern in worldly interests and from which one would fain escape:

Puisqu' homme est a sa dure rouhe
 Englué par concupiscence,
 Il peut aussytost choir en bouhe,
 Qu'estre eslevé en audience;
 Et ny a point de difference
 Du bas au hault; car ille est ronde,
 Et tourne sur ung gond le monde.³

Wheels of worldly "concupiscence" are perhaps represented by any of the wheels on which the worldly estate of man changes.¹ The logical end of immorality, following its lowest estate, is death; and so we come to the wheels which show us a grave or a coffin below, and indeed we find some turned by Death himself.² This kind no longer belongs to Fortune, though it is a possible development from hers, as she rules Death. It is, however, concerned not with the idea of morality or immorality, — there is usually no succession of moral stages through which man passes, — but with the typical periods or "ages" of his life. In art there are several wheels with the seven ages definitely marked;³ perhaps it was such a

idea in *Les Échecs Amoureux* discussed in *Modern Language Notes*, XXIX (1914), 197; and cf. the wheel of Sensual Desire in De Guilleville's *Romant des Trois Pelerinaiges*, fol. xliij^{vo} f.

¹ See the "formula of four" above, pp. 164 ff.; also Weinhold, *Gluckstad und Lebensrad*, p. 15 (Honor, Prosperitas, Paupertas, Adversitas). Barbier de Montault (*Traité*, I, 163, § 3) describes the wheel of human life at Beauvais with twelve persons on it, one at the top, five climbing, five falling, and a prone figure at the bottom. The one at the top offers one hand to help those who are ascending and pushes with his sceptre those who are falling. See three figures on the wheel: Didron, *Annales Archaeol.*, I, 433 f. (Bibl. Amiens, MS. 216); also *ibid.*, plate opposite p. 422.

² See Fiske's *Bibliographical Notices*, III, 38, § 77 (German translation of *De Remediis*, 1637); Weinhold, *Gluckstad und Lebensrad*, p. 24, and tafel ii (here Death turns the wheel); Tommaso Pischedda, *Canti Popolari*, p. 37 ("E ti spalanca — Un negro avel"); also see the wheel of the seven ages, just below. Cousin's plate of "Ultima Fortuna" (*Livre de Fortune*, pl. 199) represents Fortune and Death hurrying on together with a wheel between them; Death's hand is on the wheel and Fortune's is on his arm. See also *Du Sommerard's* plate 40, described on page 120, n. 1, above; and cf. pp. 117 ff.

³ See Heider, *Mitteilungen*, p. 117. On the relation of the ages to the planets and the seven deadly sins, see Boll's *Lebensalter* (and, incidentally, see the seven circles of the seven planets on Fortune's three wheels in Juan de Mena, Post's "Sources," p. 225). See Green, *Shakespeare and the Emblem Writers*, pl. 15 (same as Boll's pl. 3, opposite p. 144), and pp. 406-409; cf.

picture that Jacques had in mind in his famous speech. If we were expected to imagine that the wheel of the seven ages turned more than once, we might see in it a resemblance to the Buddhistic "wheel of life," with its succeeding revolutions standing for successive lives of mankind in just such a wheel of duration as we find in the Orphic mysteries.¹ But we are not justified, I think, in believing that the Middle Ages imagined a turn beyond the final state of death.

These, then, are the various new interpretations and constructions of the wheel. I believe it is always Fortune's symbol, whether borrowed for the time being or not. Now it apparently serves as a vehicle whirling on a course of its own; again, it is attached to a more elaborate mechanism; or it becomes doubled or tripled, and perhaps even generates a sevenfold engine on which humanity turns. It revolves man's feelings as well as his social status; and either this wheel or one like it turns man from the cradle to the grave — a conception of the "wheel of

¹ See L. Austine Waddell, *The Buddhism of Tibet*, pp. 102 ff., where the twelfth stage of the wheel (see p. 110) is "Decay and Death." It is interesting to compare the other stages with the wheel of "Pazienza" and "Pace" (p. 171 above): (1) Unconscious Will; (2) Conformations; (3) Consciousness; (4) Self-consciousness; (5) Sense-surfaces and Understanding; (6) Contact; (7) Feeling; (8) Desire; (9) Indulgence; (10) Fuller Life; (11) Birth of Heir; (12) Decay and Death; then back to (1) Unconscious Will. In the centre of the wheel are often figured a serpent, a cock, and a pig in pursuit of each other round the wheel, symbolizing ill-will, lust, and stupidity. For the relation of the wheel to the Orphic cycle, see Waddell, p. 109, n. 2. For Orphism and the wheel, see Jane E. Harrison, *Prolegomena to the Study of Greek Religion* (Cambridge, 1908), pp. 588 ff., with the inscription (pp. 588, 669), "I have flown out of the sorrowful weary Wheel."

life" which seems more likely to come from the symbol of Fortune' than from any external source like the Buddhist figure. Thus Fortune's wheel assumes no small importance in the thought of man's existence.²

V

SUMMARY

In a review of the development of Fortune's wheel in the mediaeval period, six important points are made

¹ Boll derives this wheel from Fortune's: his two plates both show the goddess.

² A few references to other wheels, which I have collected by chance in my study, may be of use to some other investigator of the subject:

For the wheel of God, with the rim controlled by Fate, see Boethius, *Cons. Philos.*, IV, pr. vi (with the rim transferred to Fortune in *Les Échecs Amoureux*, see *Mod. Lang. Notes*, XXIX, 197; see the wheel of Fate in Petrarch's *Bucolicum Carmen*, p. 141, ecl. x, l. 15, and in his *Africa*, ii, 293). Cf. the wheel with Christ on it, Gaidoz, *Le Dieu Gaulois*, pp. 83-84. For the wheel of God in general, see Elizabeth of Schonau's description (Migne, vol. CXCv, col. 136; and cf. Ezekiel 1, 15-17; x, 9-10):

Vidi non procul ab eis duos arietes, grandes, et praeclaros, ante signum crucis, et sustinentes in humeris suis rotam nimiae claritatis, et mirae magnitudinis. His omnibus ita perspectis, in haec verba prorupi dicens: "Levate oculos cordis uestri ad deificum lumen; attendite et uidete gloriam, et maiestatem Domini."

One recalls the three rings of three colors symbolizing the Trinity in Dante's *Paradiso*. A wheel of fire is described by Friedrich Vogt in Weinhold's *Zeitschrift des Vereins für Volkskunde* (Berlin, 1893), III, 349 ff.; for its relation to the wheel of Fortune, see pp. 368-369.

For the wheel of the sun among the Gauls, see Alexandre Bertrand, *Nos Origines: La Religion des Gaulois, les Druides et le Druidisme* (Paris, 1897), pp. 185 ff., and see pl. xxii. For the wheel of Saint Katherine, see Lydgate's *Minor Poems*, ed. MacCracken, I, 122 (l. 59), 134 (l. 19), and, for an Easter wheel, 377. The wheel of Desire moderated by the wheel of Temperance is described by Froissart, *L'Orloge Amoureux* (*Œuvres*, I, 59); the wheel of Victory in the *Squyr of Lowe Degre*, ed. E. W. Mead, l. 258; the wheel of the law, with a thousand spokes symbolizing the symmetry and completeness of the law, by Waddell, *The Buddhism of Tibet*, p. 389 (for pictures of it, see pp. 134, 337).

clear: (1) In classical literature the wheel is intimately connected with the changes of man's estate. (2) In Boethius we have practically a beginning of the two great conceptions, (a) Fortune turning the wheel, (b) mankind actually on the rim. (3) The tradition after Boethius, starting in the twelfth century, gives us chiefly the figure we find in his portrayal. (4) Throughout the Middle Ages the general idea is that Fortune turns the wheel, on which mankind clings; in the line of this development occurs the "formula of four." (5) There is another tradition showing various figures attached to the face of the wheel, among them Fortune herself and Ixion. (6) A perversion of the wheel-figure culminates in the "wheel of life" or the "wheel of the seven ages," apparently because Fortune's wheel seemed to dominate in every phase of human life.

The wheel as a symbol should be dwelt upon particularly because it is so mediaeval in its conception. The mediaeval imagination was primarily concrete: it necessarily visualized the symbol as an actual image with the real figures of men turning upon it. Nor was this the figment of one mind alone. The representation delighted many, and writers enjoyed alluding to it and elaborating it, perhaps adding a wheel or two more in order to enhance the effect. In its final forms the figure is the creation, not of one poet alone, but of hundreds.

One point more is worth remarking — that the picture of Fortune standing on the wheel satisfied Roman art. But in its last analysis that figure is, as I have said, poor allegory, for the Fortune depicted with such an unsteady footing is not the goddess but the type. Obviously, however, the Roman artist did not analyze the idea in that

way. He could hardly have meant us to think of Fortune as revolving with the wheel; probably he used the wheel as a symbol of instability, as something to identify the goddess with that quality. But neither the picture in Roman art nor that in Roman literature was satisfactory to the mediaeval artist. He represented Fortune as strictly the goddess turning the wheel with her own hand; and only in a few cases did he leave room for confusion with her less dignified offspring "fortune" — that is, with her gifts to humanity.

CONCLUSION

Any attempt to bring together the various threads of thought in the preceding chapters is not merely impossible, it is really futile. For this study as a whole, instead of being an extensive analysis of the problem of Fortune, is in itself only a summary. Some observations, however, follow inevitably from the material which we have reviewed. In the first place, our chief question in this investigation, at the end of the study as at the beginning, must be that of the actual survival of the goddess.¹ We can have no complete proof of her existence, but are there no marks by which we may fairly decide in her favor — by which, that is, we may feel justified in believing that an actual faith in her persisted? What, after all, are the peculiar marks of a religious growth that distinguish it from a poetic fiction?

As I should judge, they are somewhat as follows: (1) continued vitality, which keeps the personified figure from becoming outworn; (2) the independence of any historical period, to show that the cult is something more than a part of some artistic creed or aesthetic fad; (3) an automatic development of external media in which we

¹ Cf. F. von Bezold, *Das Fortleben der antiken Götter im mittelalterlichen Humanismus*, p. 76: "Natürlich handelt es sich dabei nirgends um eine offene Rückkehr zu den göttlichen Personen der heidnischen Mythologie. Aber es kommt immerhin zu einer so lebhaften Veranschaulichung einzelner antik-philosophischer Begriffe, dass sie fast den Charakter von Gottheiten erhalten oder mindestens als nicht wegzudenkende Faktoren der Weltregierung erscheinen. Dies gilt vor allem von der Natur, dem Schicksal und der rätselhaften Gestalt der Fortuna."

THE COURT OF FORTUNE

find the figure embodied — a growth of symbolism, in other words; (4) the use of ritual for purposes of devotion or for an indication of faith.

Of these marks, Fortuna shows all, except possibly the fourth. And even there, the prevalence of games of chance, throwing up a coin to decide an issue, and various other minor superstitions which somehow fail to go out of usage, seem to give the visible sign of some sort of credulity, however flippantly concealed or humorously defended. The vitality of the cult in all its aspects is perhaps its most salient quality, and the power of the goddess to gather to herself the apparatus of half-forgotten folk-lore and to give it life and meaning must have some significance. Thus the trappings of old religions, in the material taken from accounts of the Earthly Paradise or the realm of the Otherworld, and the wheel itself, no matter what its source, are charged with new power in the literature of the period. Moreover, the goddess still continues in our own day to ride prosperously and reign: I have found about sixteen references in *Roderick Random*, with the old formulae still going strong; Meredith glances at the problem in the *Egoist*; a "Business Man's Calendar" prays briefly that "Good Fortune spin her wheel right merrily for you"; and wherever one searches an allusion is sure to turn up. The skeptic denies her existence, but in the next moment shows his belief in mere chance; the rationalist is likely to continue something like the Aristotelian solution; the imaginative writer may give her proper space in the skies. But in one way or another she goes on, "of chaunges newe lady and princesse," a favorite of the romanticist, and a phantom of delight to pique the intellect of everybody. Only a few,

and they stand out by contrast, have seen in Fortune the servant of God performing the Divine Will, and thus disposing of chance in the only way in which it may be adequately dealt with and disposed of at the same time. These have been, it is true, crass idealists. Some of them were also great poets.
